

Technical Exhibit 16

Asset & Vulnerability Tracking Resource (A&VTR)

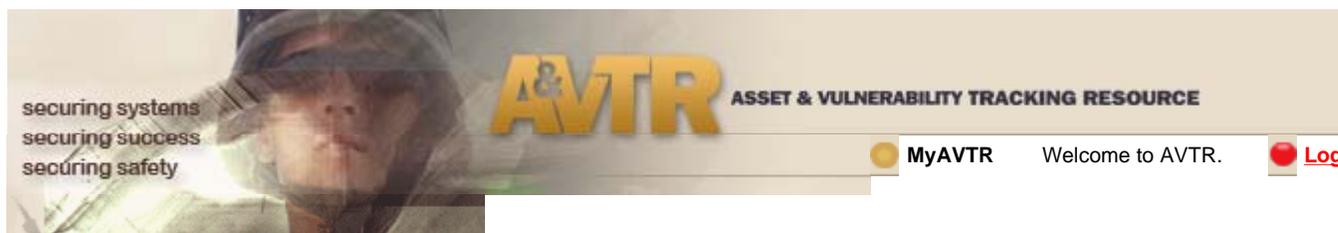

The purpose of this exhibit is to provide prospective Service Providers (SP) insight into the scope and complexity of this mission.

This Technical Exhibit is a compilation of screen prints from the Department of the Army Asset and Vulnerability Tracking Resource (A&VTR) Database. This database is used for Information Assurance Vulnerability Alert (IAVA) management and reporting. The purpose of including this exhibit is to provide prospective SPs with an idea of the types of information currently required for input or to report on IAVAs.

This data was collected from the A&VTR website in early 2005 and may not precisely represent the situation at the time of the advertisement of the solicitation.

TECHNICAL EXHIBIT #16

Asset and Vulnerability Tracking Resource (A&VTR) Database is an official Army tool and database used for Information Assurance Vulnerability Alert (IAVA) management and reporting. Technical Exhibit #16 is a compilation of screen prints from the A&VTR to give an idea what information is currently required for input or to report on IAVAs.

AVTR File Inventory

1) To IMPORT ASSETS, create a comma-separated text file. This text file must contain an asset's name, plus the MAC address and IP address. Only one asset per line is expected. For example...

```
Test Asset,192.168.1.1,AA:BB:CC:DD:EE:FF  
Another Test Asset,192.168.1.2,AA:BB:CC:AA:BB:CC
```

You may optionally name your file and write a short comment to describe its contents - if you choose not to name your file, AVTR will automatically keep the logical name of the file you uploaded.

2) To UPLOAD, select the file created above using the buttons below. After you have selected the file, click Upload. The selected file must be a text file, or AVTR will be unable to decipher the contents of the file, and an error will occur. After you have uploaded the selected file, AVTR will inform you as to how many unique assets it found and present you with a screen to assist you in migrating those assets into your unit.

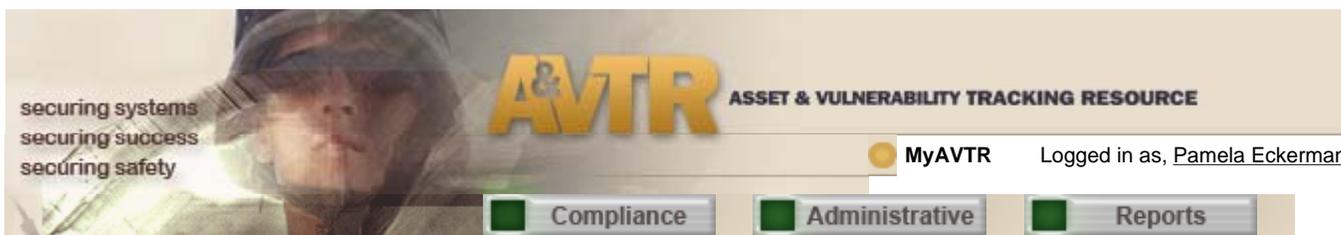

Please select the file to load assets from:

Enter information about the file batch (optional):

File Name:
