

Anacostia Watershed Restoration

Prince George's County

Proposed Restoration Sites

- Restoration of 3 degraded in-stream sites in both the NW and NE branches (6 total sites) = 6.9 miles of in-stream habitat, 4.3 miles of fish passage on the Northwest Branch, and connection to 13.5 miles of previously-restored habitat from earlier projects

- Removal of fish blockages on Northwest Branch and Sligo Creek, providing alewife and blueback herring access to their historical range
