

Economic, Socio-Economic, and Financial

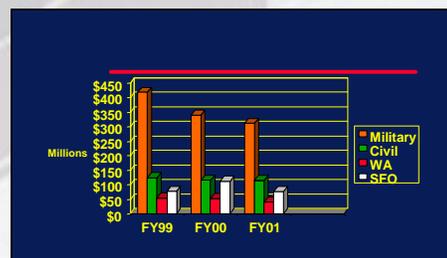

US Army Corps
of Engineers
Baltimore District

- ▶ Economic Analyses
- ▶ Financial Analysis
- ▶ Life Cycle Cost Analyses
- ▶ Social Analyses

Our team of economists, social scientists, and community planners can provide comprehensive economic and social analysis to determine the best alternative to meet your needs.

We are experienced determining the willingness to pay for public goods, life cycle costs and benefits, and cost effective alternatives. We can utilize various Input/Output models for estimating regional economic impacts and regression analysis for determining trends and rational expectations. Additionally, we can conduct demand analysis for recreational and environmental resources. Our team can also use probabilistic modeling to estimate future economic and social impacts.

The key to successful decision-making lies in making informed decisions. Whether you are developing a master plan, making critical real estate decisions, or determining potential impacts on your affected public, the Baltimore District has the knowledge, experience, tools, and access to a host of social and economic data to ensure you make the best possible decisions.
