

Water Resource Planning

US Army Corps
of Engineers
Baltimore District

- ▶ Flood Insurance Studies
- ▶ Floodplain Management Studies
- ▶ Infrastructure Analysis
- ▶ Natural Disaster Planning
- ▶ Stormwater Management Planning
- ▶ Watershed Management

As part of the nation's largest water resource agency, we have the expertise to both implement solutions to water resource problems and provide a full range of technical services and planning guidance on water resources and related matters to states, local governments, other Federal and non-Federal entities.

We can assist you in the preparation of many types of studies dealing with water resource issues such as flood insurance studies, floodplain management, natural disaster planning, stormwater planning, and watershed management.

Our technicians, engineers, planners and scientists are highly trained in all areas of watershed management including riverbed sediment quality, biological assessments, flood control, chemical analysis, and in the use of Geographic Information Systems (GIS) to create comprehensive watershed management plans that help predict scenarios and plan for future impacts to our important water resources. Watershed studies can range in size from small stream reaches on an installation to large county or municipal drainage basins, and interstate watersheds.

As part of the nation's oldest and most experienced water resource agency, the Baltimore District can assist you with your water resource related needs.

For more information contact Mr. Robert F. Gore, Planning Division, at (410) 962-4995.
