BALTIMORE COASTAL STORM RISK MANAGEMENT FEASIBILITY STUDY

COST NARRATIVE

Summary of Scope of Work:

The study area for the Baltimore Coastal Feasibility Study includes four (4) main study areas or planning units: Inner Harbor, Patapsco, Locus Point, and Martin State Airport. Many flood risk management structures were evaluated and through the project matrix elimination process. Selected structures were elevated roads, earthen levees, floodwalls, and aluminum stop log closures as a flood protection line. For the pre-Tentative Selected Plan, this Coastal Storm Risk Management Project includes the following civil works feature accounts for selected structures and associated work for the four (4) study areas:

- Account 01. Land and Damages. For both structural and nonstructural features of work, real estate costs due to construction impacts are assessed by and provided by Real Estate Division. Real estate cost for structural plan includes real estate administrative cost to provide easement and access to study areas. Real estate cost for nonstructural plan includes estimated cost to temporary relocate local residents while nonstructural measures such as flood proofing or structural elevation is applied. Both real estate costs are accounted in for in separate Total Project Cost Summaries, one for structural plan, and one for nonstructural plan.

- Account 02. Relocation. Relocation is likely but because of lack of utility survey, allowance costs based on experience of similar past studies were used. For structural plan, a budgetary allowance applied using ten (10) percent of construction accounts, accounts 11, 13, and 15. This study area includes an approximately $170,000 allowance to cover potential minor relocation costs such as disconnect or reconnect or repair of local communication lines. There are large light poles where a 4 ft I-wall can conceivably be built around to avoid relocation and potential opposition from utility companies and local sponsors.

- Account 11. Levees and Floodwalls. The proposed project alignment shows elements of Measures that include walls and levee constructions for multiple areas. As far as flood wall construction goes, I-walls and T-walls are used. Elevated roads or levees with asphalt pavement are also included. Length of wall and levees and assumed typical cross section dimensions are provided by the Project civil engineer. Preliminary quantity take-offs for the walls and levees based on averaged wall heights and typical cross section dimensions were conservatively estimated. Each segment of proposed lengths for walls or levees are assumed to have the same averaged elevation with the same as the constant desired structure height. The project alignment is crossing many areas that may need traffic control, which is estimated by assuming that new traffic signals, vehicle barriers, and flagmen may be needed. All costs in connection with construction work for floodwalls and levees were estimated in MII using MII software, Cost Book Library 2016 as starting point, updated with 2021 National Labor Library, and latest fuel prices for

2020 Equipment Region 02, and escalated to 2022 price level using CWCCIS Escalation Calculation dated 30 Sep 2021 for account 11.

- Account 13. Pumping Plant. The NAO preliminary estimate for a pump station in Freemanson, Norfolk VA at price level in 3rd quarter, 2014 price level was used as a template to parametrically estimate pump stations for some of the areas in the project alignment. The MII estimate portion is repriced with 2016 Cost Book, updated latest wage rates and escalated to current price using CWCCIS Escalation Calculation dated 30 Sep 2021 for account 13 from Q3 2014 to Q1 2022. The size of concrete sump chamber, sluice gates, pipes, electrical, and other appropriate items are also adjusted to accommodate the number of pumps. Pumps are assumed as vertical axial pumps. Pump stations are proposed at Martin State Airport Rd - Wilson Rd, Inner Harbor and Locust Point sites: West, North and Fort McHenry.

- Account 15. Floodway Control - Diversion Structures. Stop log structure cost is parametrically estimated using historical $580/sf stop log cost in a Washington, DC project in quarter 1 of 2016 which is escalated to quarter 1 in 2022 for account 15. The square foot area is basically length times height of structure. It is not exact cost but should provide a close estimated cost of a stop log closure structure. The parametrical cost is assigned to subcontractor since the historical cost was done by a Prime contractor. Stop log closure structures are assumed in all four (4) study areas because they are cheapest solution while providing a temporary sturdy structure, but they may require a lot of time to set up and install. Sponsors may desire to have a quicker and more expensive temporary structure such as automatic pop-up structure that can be controlled afar with a push button. A market survey for a compatible structure was done and has shown that an auto push-button pop-up structure could cost as much as 80% higher than a stop log structure. Risk analysis for this item includes estimated magnitude of cost impact.

- Account 18. Cultural Resource Preservation. The proposed project alignment has potential impacts on cultural resources that may require extensive archaeological mitigations. Since no surveys were done, areas that are currently considered as significant sites may potentially have extensive impacts or no impact. A conservative approach was taken to count as if most sites are high risk sites and will have substantial archaeological mitigations. The cost for archaeological mitigation was conservatively estimated and provided by a NAB archeologist. For the nonstructural plan, the cultural preservation cost is also provided by a NAB archeologist and is captured in separate TPCSs for 100 years, 50 years, and 20 years level of protection.

- Account 19. Buildings, Grounds, and Utilities. This account is for nonstructural costs for properties available in study areas. There are two (2) types of nonstructural methods being considered, flood proofing and structural raising or elevation. The nonstructural cost is based on MII estimate done for the 2020 Denville study in New Jersey. It is upgraded to 2022 price level using escalation and latest cost libraries such as 2021 Labor Library and 2020 Equipment Library for Region 2 with updated fuel and Cost of Money rates. The average cost of flood proofing and the average cost for structural elevation for different types of properties are computed. These two (2) average costs are applied to

each property according to whether it is selected to be either flood proofing or structural elevation. The total nonstructural cost for all properties for each level of protection is included in separate TPCSs. For example, for the 100 years protection, there is a TPCS, and likewise for 50 years and 20 years of protection.

- Account 30. Planning, Engineering, and Design. For structural plan, the team decided to use 46% of construction cost. For nonstructural plan, it is decided that 15.3% of construction cost is adequate since less paperwork would be involved. It is also noted that the Baltimore District does not have any history of actual involvement in contract acquisition for nonstructural plan. We only may only have some small and partial involvement with local authorities such as cost sharing and administrative oversight.
- Account 31. Construction Management. For structural plan, the team decided to use 46% of construction cost. For nonstructural plan, it is decided that 10% of construction cost would be adequate. Again, because lack of history of District's involvement, it is hard to tell. However, considering contract management for construction work at residential areas, it would not be expected to be extensive as regular construction work such as those for levees or floodwalls. Plus, there is an expectation that most contract management would be done by local authorities.

Construction Cost Estimate:

The following methodology is used in the preparation of the cost estimate for Baltimore Storm Risk Management Project:

a. The estimate is in accordance with the guidance contained in ER 1110-2-1302, Civil Works Cost Engineering.

b. The estimate is presented in Civilworks Work Breakdown Structure.

c. The price level for the estimate is in 1st Quarter of FY2022.

d. Construction costs developed by Estimating and Specifications Section, Engineering Division, Baltimore District are based on a concept design developed by NAB Engineering team. Unit costs are developed using the M-CACES Second Generation (MII) software containing the 2016 English Cost Book Library which was used as a starting point. Historical cost data from similar projects are used for parametric estimate and updated with latest RSMeans material cost. The estimate is documented with notes to explain the assumed construction methods, crews, productivity, and other specific information. The intent is to provide or convey a "fair and reasonable" estimate that which depicts the local market conditions.

e. Labor costs are based on the 2021 National Labor Library.

f. Bid competition: No contracting plan is done at this point. Bidding competition is assumed to be unrestricted in the baseline estimate since the overall work is typical to the area and the massive size of the project will likely draw multiple national level large size contractors to bid on the project. However, unfavorable bidding environment such as low competition due to saturated work in the area could cause increase in bid costs. This assessment is reflected in the Cost and Schedule Risk Analysis.

g. Contract Acquisition Strategy: Acquisition strategy is not yet determined at this point. However, to reflect the historical market condition for this type of work, Prime Contractor is assumed to perform minimal work and will sub-contract out all remaining work.

h. Labor Shortages: It is assumed that there will be a normal labor market since large project such as this would likely be delayed that by the time funding is authorized, there would be a normal labor market. In addition, even though current labor shortage is happening almost everywhere, there has not been any cost impact in construction cost for civil work projects.

i. Materials: Most material costs are from the Cost Book Library. Vendor quotes were used for non-Cost Book items such as quotes for vertical axial pumps for the pump stations. Assumptions include:

   1. Government furnished materials are assumed. Quoted delivery charge is included in the vendor's material cost.
   2. Materials will be available from local nearest available sources.
   3. Hauling: most hauling will be done by trucks. For trucking, it is assumed that the average speed is 30 mph factoring traffic hours in often congested major routes.

j. Equipment: Rates used are based on the latest USACE EP-1110-1-8, Region II. Adjustments are made for fuel and facility capital cost of money (FCCM). Judicious use of owned verses rental rates was considered based on typical contractor usage and local equipment availability. Full FCCM/Cost of Money rate is latest available; MII program takes EP recommended discount, no other adjustments have been made to the FCCM.

k. Fuels (gasoline, on and off-road diesel) were based on local market averages for on-road and off-road fuels in Mid Atlantic areas. Since fuels fluctuate irrationally, an average was used.

l. Major crew and productivity rates were developed and studied by senior USACE estimators familiar with the type of work. All the work is typical to the Baltimore District. The crews and productivities were checked by local NAB estimators, discussions with contractors and comparisons with historical cost data. Major crews include hauling, stonework, and planting.

m. Most crew work hours are assumed to be 8 hrs 5 days/week which is typical to the area. It is anticipated that no overtime is required for reasons such as time of year restriction because it is anticipated that there is none. At the Reagan Airport area, there will likely be off hour or nightly differential hours which may take place to avoid the interruption to the normal operations of the airport. Therefore, the construction estimate for levees and floodwalls at the airport includes ten (10) percent labor cost increase for nightly differential.

n. Mobilization and demobilization: Contractor mobilization and demobilization are based on the assumption that most of the contractors will take about one 8 hrs day to mobilize and one 8 hrs day to demobilize.

o. Field Office Overhead: Typically, civil works projects can have field office overhead ranging from 9% to 20%. Since this project is a larger than the norm, 13% was used for Job Office Overhead. Overhead assumptions may include: Superintendent, office manager, pickups, periodic travel, costs, communications, temporary offices (contractor and government), office furniture, office supplies, computers and software, as-built drawings and minor designs, tool trailers, staging setup, camp and kitchen maintenance and utilities, utility service, toilets, safety equipment, security and fencing, small hand and power tools, project signs, traffic control, surveys, temp fuel tank station, generators, compressors, lighting, and minor miscellaneous. Field office overhead for Pump Station work is kept at 15% as the original pump station MII estimate. It is reasonable since the pump station may likely be awarded in a separate contract or bundled in a phased contract which is typically seen with high field overhead.

p. Home Office Overhead: Due to large size of project a little less than typical percentage was used (4%) for HOOH. Subcontractor's HOOH is at 5%. The rates are based upon estimating and negotiating experience, and consultation with local construction representatives. However, the HOOH rate could be higher if market and bidding condition is limited in competition or there is a labor shortage which forces construction companies to increase overhead to provide incentives to hire skill workers or professionals field management teams. This risk is captured as part of market risk and rated as high risk in the CSRA.

q. Profit: Since the Construction Cost Estimate is currently in a budgetary phase, profit is typically included at 10% for Prime Contractor. However, due to the size of project

and general expectation that there will be some competition, 8% profit was used for Prime and Prime's Profit on Sub's work. Sub-contractors' profit is mostly 8%. Profit in pump station is kept at 9% for Prime and 10% for subs to maintain the integrity of the original estimate and to also assume that pump station may be in a separate contract.

r. Sales Tax: Only State sales tax was applied. No local sales tax was included in the estimate.

s. Bond: Bond is calculated at 0.66% using Bond Table in MII for the Prime contractor. For pump station estimate under a separate Pump Station Prime, it is at 0.7% which is also from Bond Table calculation.

t. Contingency: Contingency is based the outcome of the Cost and Schedule Risk Analysis for pre TSP milestone which was done on 14 March 2022.

u. Escalation: No escalation to midpoint of construction according to tentative construction start dates is included in the estimate but will be included in the Total Project Cost Summary (TPCS) to avoid duplicates.

v. HTRW: The estimate includes no costs for Hazardous, Toxic, and Radioactive Waste (HTRW) since there is no potential concern for HTRW where the levees, floodwalls, closure structures, and pump stations are proposed.

Total Project Cost Summary

B-1. General.

A Total Project Cost Summary (TPCS) is required for all civil works cost estimates submitted for approval at all levels within the U.S. Army Corps of Engineers (Corps). The summary and supporting contract cost sheets are the basis for the official Project Cost Estimate (PB-3) ER 11-2-240. It is a living document, developed from feasibility to project completion to present current working estimate (cost, schedule (escalation), risks (contingencies). The TPCS must consider current escalation tables, which are updated twice annually: March and September.

The TPC reflects all applicable project feature costs, contingencies, escalation to Project First Cost and inflation to Fully Funded Project Costs and is presented in Federal and non-Federal dollars. The TPC emerges when the TPCS form is completed (shown in Figures B-2). The TPCS is a PDT product. While the cost engineer prepares the basic elements of the form, the PM, Real Estate and Construction offices play a major role in establishing Program Year, Federal and non-Federal shares, spent costs, 01 Lands and Damages, 30 PED and 31 Construction Management values.

For the cost engineer, the Total Project Cost form is developed and presented with three different estimates over time: Estimated Cost (Price Level), Project First Cost - Constant Dollar, and Total Project Cost – Fully Funded (reference Figure B-2)

i. Estimated Cost (Effective Price Level) (TPCS columns C through F) is the current developed cost estimate which includes contingencies. The effective price level date for Estimated Cost (shown in DAY MONTH YYYY format) is commonly reported as the previous 1 Oct 20XX to support economic study and escalation to Project First Cost

ii. Project First Cost - Constant Dollar Cost (TPCS columns G through K) is the Estimated Cost then escalated to the PROGRAM YEAR effective price level by applying the appropriate escalation from the CWCCIS tables. The Project First Cost - Constant Dollar (shown in 1 OCT 20XX) is the cost estimate used in feasibility reports and Chief of Engineer's Report (Chief's Report) for Congressional funding requests

iii. Total Project Cost (TPCS columns L through O) is the FULLY FUNDED WITH INFLATION to represent the total cost of the project. The inflation to midpoint of each activity is added from the Project First Cost column set. Total Project Cost (or Total Cost of Construction of GNFs when discussing navigation projects) is the cost estimate used in Project Partnership Agreements and Integral Determination Reports. Total Project Cost is the cost estimate provided to non-Federal sponsors for their use in financial planning as it provides information regarding the overall non-Federal cost

The Project First Cost – Constant Dollar Cost estimate is to be used in the Chief's Reports and other decision documents to support the funding request. The Project First Cost should include, among other things, an estimate of: (i) construction and management costs, including both Federal costs and non-Federal sponsor in-kind contributions, as applicable; (ii) planning engineering and design costs; (iii) lands, easements, rights-of-way, relocations and dredged materials (LERRD) values; and (iv) contingencies. Where several years elapse between the signing of the Chief's Report and the consideration of legislation to authorize a project, the Project First Cost must be updated to reflect the current Project First Cost date for Congressional funding consideration, in accordance with ER 1110-2-1302.

Figure B-1 illustrates the TPC process. Figures B-2 (summary sheet) and B-3 (sample supporting sheet) are examples based upon feasibility estimate reporting requirements in Engineer Regulation (ER) 1105-2-100, Planning Guidance Notebook. "Two project cost estimates shall be displayed in the feasibility report; one based on constant dollars and one based on projected inflation rates." The guidance notebook is referring to the Project First Cost and the Total Project Cost columns J and O. The TPCS (summary sheet) is a signature document for the appropriate district managerial approvals. ER 1105-2-100 states that project cost estimates will be prepared by or reviewed by the cost engineering office in the district and the chief of that office will sign the estimate. Real estate estimates included in the project cost are reviewed, approved, and signed by the chief or designee of the real estate office. Project Management is the third required signature that assumes responsibility for the TPCS value. Figure B-2 also lists other review/approval signatures that may be a district requirement.

Preparing a TPC during the feasibility phase is required, because it is the first document that will show the estimated total project cost at the anticipated authorizing budget year and forecast the total project cost inflated through construction based on the known scope and schedule.

B-2. Sample TPCS (Figure B-2) is in a spreadsheet format beginning with the total project cost summary followed by contract cost summary supporting sheets appearing like Figure B-3. The TPCS template can be downloaded from the Cost MCX website.

B-3. TPCS Form Procedures
a. Estimated Cost (Price Level)
TPCS Headers: Ensure the form presents the formal project name. project number. location. author and date.

Column A: WBS Number – Enter the Civil Works Breakdown code for each feature (refer to the Civil Works Work Breakdown Structure Appendix).

Column B: Civil Works Feature and Sub-Feature Description - For the summary sheet Figure B-2, enter the feature code title. For the supporting sheets like Figure B-3, enter and identify the project phase, contract, etc. as well as the CWWBS description of the item. For Figure B-3, separate lines for the same WBS element may be prudent, pending certain programs or presentations desired. The various phases or contracts on the Figure B-3 sheets is to make distinction between varying schedules of occurrence, associated escalation and risks (contingencies).

The first primary column set, sub columns C through F, is the estimated cost plus contingencies, typically in current or most recent estimated dollars (must be less than 2 years old) that includes all feature accounts: the MCACES construction estimate(s), estimates for lands and damages, preconstruction, engineering and design, and construction management. The following paragraphs are instructions for completing data entry for each scheduled contract (figure B-2 and B-3). Figure B-2 serves as the summary roll-up from the supporting sheets such as Figure B-3.

Column C: COST- Entered in this column are the estimates of those costs that require funding or are remaining costs yet to incur. The costs should reflect the actual estimated costs in $1000s based on the previous October price level that the estimate was prepared. Note: For the Real Estate estimate, ensure the estimate is recent and the contingencies (incremental costs) are separated from the appraisal quote for presentation in the contingency column.

Column D: CNTG (contingency) - This is the dollar amount of contingency determined from a risk-based analysis. It is the result of Column C times the entered contingency percent in Column E or an actual amount determined by a cost risk analysis.

Column E: CNTG % (contingency percentage) - Enter the percentage of contingency (from risk analysis). For 30 and 31 accounts you may want to use the average of the construction element contingencies in lieu of developing a separate contingency. For 01 Lands and Damages, the Chief of Real Estate is responsible to provide a signed estimate of costs and should be able to provide contingency data, also referred to as incremental costs. Ensure that the real estate contingency is separated from the real estate estimate and presented separately as contingency. Contingency is the full dollar value of the various features, converted to a contingency. Reliance solely on a per cent value can induce errors when differing contingency sources such as real estate are also used.

Column F: TOTAL - This is the sum of columns C and D.

b. Project First Cost – Constant Dollar.
The second primary column set is the Project First Cost, also known as the Constant Dollar total. This totaled cost is the one reflected in all Chief's reports for requested funding: effective price level for the year of the Chief's Report submissions. Typically the year of the report submission is the year prior to the anticipated funding. This total can become more complicated for ongoing projects with spent costs that require additional funding.

Column G: - ESC (escalation) This column is the percentage of escalation from the first column set to the PROGRAM YEAR DATE. This moves the estimate cost from the price level when it was prepared to the Program Year price on a constant dollar basis. This escalation is calculated utilizing the Civil Works Construction Cost Index System (CWCCIS) found in EM 1110-2-1304. The CWCCIS is a reflection of the OMB projected rates for future costs, experienced inflation for past costs for each of the Feature categories. The escalation tables are updated twice annually: March and September. To determine the escalation percent, locate the CWCCIS index factors of the Feature account or element for the 1st quarter date of the program year and divide by the index factor of the established or initial estimate date (no less than 2 years old). Subtract value of 1 and multiply by 100 to obtain the percent escalation.

Column H: COST - This is the cost from Column C with the added percent of escalation computed in Column G.

Estimated Cost to Project First Cost

EPL Estimate + Continuency (1 Oct 20XX) Risk Based (Current Dollars)	+	Contingen (risk	x	Cost Index (Budget Yea	=	**Project First Cost Budget Yea**				
				Cost Index (EPL - Current Estimate)		**Constant Dollars**				

Column I: CNTG (contingency) - This is the Contingency value from Column D with the added escalation determined in Column G.
Column J: TOTAL- This is the sum of Columns H and I. This is the constant dollar estimate at PROGRAM YEAR price level, 1 October, also referred to as Project First Cost, excluding any project spent costs. within the Chief's Report. For ongoing projects, the Project First Cost would include Spent Costs to reflect total first costs for the project.
SPENT THRU - Enter the amount of EXPENDED Federal funds for each Feature (this information is commonly obtained from project or program managers. Caution here is advised. If these funds have been expended by a sponsor, but the Government has not yet spent reflective Federal funds, those costs must remain in the Project First Costs, excluding escalation and contingencies. The spent costs of FEDERAL project dollars, already received and expended, is entered as actual amount spent in the year it was spent. The year of the expenditure must exclude inflation and contingencies because no further inflation or risks on these costs can occur. This is entered on the TPCS (figure B- 2) (PAGE 1) only.
c. Total Project Cost (Fully Funded with Inflation).
The third primary column of the TPCS is the total project cost estimate inflated through project completion, which is the second cost estimate referred to from the Planning Guidance Notebook. For financial analysis, an inflated dollar basis is to be used for the sponsor's information. Reasonably accurate and complete cost estimates and schedules are necessary for the Federal Government and the non-Federal sponsors to make prudent financial and budgetary decisions in obtaining and expending funds.
The project schedule is used to forecast when project elements will begin and the duration of each element. Knowing how each activity/element is funded and its respective duration will illustrate when the costs are expected to occur. In cases where multiple construction contracts or phases are planned, each should be addressed separately to present a more realistic escalation to design and construction midpoints for each contract. It is recommended that separate contracts be presented as a subset spreadsheet with values that roll up to the summary level total (Figure B-1).

Column L: INFLATED – This is the inflation percentage from PROGRAM YEAR price level to the MIDPOINT of the performance period of each Feature item. Midpoint dates are determined from the Project Schedule. The amount shown in the column is the percentage of increase.
For construction contracts and other project elements having a relatively short duration, choosing an index coinciding with the midpoint of the duration may be adequate to escalate the costs for inflation. Also, activities/elements that are primarily level of effort, where costs are relatively consistent throughout the duration, a date at the midpoint of the duration is usually adequate to select the CWCCIS index to inflate the activity/element cost.

Project First Cost

Budget Year x

Constant Dollars

Cost Index (Midpt of Activity	=	**ully Funded**				
Cost Index (Budget Year)						

m. Column M: COST- Is the cost from Column H with midpoint inflation added from the CWCCIS calculations (column L).

n. Column N: CNTG (contingency) - This is the Contingency dollar value from Column I with the added inflation factor (column L).
o. Column O: FULL (fully funded amount) Is the fully funded estimate amount for the Item (Column M + Column N + Spent Costs). The overall summation of column O on the TPCS (Figure B-2) is the TOTAL PROJECT COST ESTIMATE inflated through the Project Schedule midpoint for each separate activity.
o. Column P: Found on the succeeding sheets. such as Figure B-3. for the TPC summary. the column presents the midpoint date for the inflated value for each Feature.

The costs of water resources studies and projects developed by the Corps are shared between Federal and non-Federal entities as defined in laws and administrative provisions. The Water Resources Development Act of 1986, established new cost sharing rules for all studies and projects conducted by the Corps. The cost sharing provisions of the Water Resources Development Act of 1986 place greater financial responsibilities on non-Federal sponsors of Corps projects. The amount of non-Federal share varies depending upon the project purpose and the general and specific laws that apply to each project. Coordination with Project and Program Management is required to clarify this share percentage. Cost sharing can and does change over time.

The total project cost inflated through construction is divided into Federal cost and non-Federal cost. The non-Federal cost is for the sponsor's information and financial analysis. The cost engineer must coordinate with the project manager to determine the appropriate cost sharing percentages applicable to the project. To illustrate, the cost of feasibility studies is shared equally (50/50) and the remaining project cost may be shared 25 percent non-Federal cost and 75 percent Federal cost. Guidance on cost sharing for each civil works mission and authority is presented in ER 1105-2-100 and coordination with the project manager is necessary.

B-4. Section 902 Project Cost Limit.
When appropriate for authorized projects spanning several years, the TPCS is updated annually for comparison to the Section 902 project cost limit. It can be computed and presented on the updated TPCS to serve as a current working estimate.
The maximum project cost limit imposed by Section 902 is a numerical value specified by law, which must be computed in a legally supportable manner. It is not an estimate of the current cost of the project. The construction component of the authorized cost will be updated to account for current scope, quantities, costs, schedules and risks and applying escalation using the current CWCCIS escalation tables. The real estate component of the authorized cost will be updated to account for historical inflation based on changes to the Consumer Price Index. ER 1105-2-100, appendix G, paragraph G-15a provides detailed guidance on the calculations necessary to determine the numerical value.

Estimated Cost (Price Level) is the initially developed cost estimate which includes contingencies. The effective price level date for Estimated Cost (shown in MONTH YYYY format) is usually the date of preparation of the cost estimate.

Project First Cost (Constant Dollar Cost) (Price Level) is the Estimated Cost BROUGHT TO THE EFFECTIVE PRICE LEVEL. The effective price level for Constant Dollar Cost (shown in MONTH YYYY format) is the date of the common point in time of the pricing used in the cost estimate. Constant Dollar Cost does not include inflation. Constant Dollar Cost at current price levels is the cost estimate used in feasibility reports and Chief's Reports (see paragraphs 5(a) and 5(b) below). THE CONSTANT DOLLAR COST SHOULD BE EXPRESSED AS THE FY OF THE CHIEF'S REPORT TO ENSURE THAT THE CW PROGRAM TOTALS IN ONE FY DOLLAR TO ASA AND CONGRESS.

Total Project Cost is the Constant Dollar Cost FULLY FUNDED WITH ESCALATION to the estimated midpoint of construction. Total Project Cost (or Total Cost of Construction of GNFs when discussing navigation projects) is the cost estimate used in Project Partnership Agreements and Integral Determination Reports. Total Project Cost is the cost estimate provided non-Federal sponsors for their use in financial planning as it provides information regarding the overall non-Federal cost sharing obligation. See the enclosed tables for more detail of what is or is not included in the Total Project Cost.

COASTAL STORM	By project element	Continued Construction (periodic nourishment)	For Hurricane and Storm Damage Reduction Only: Estimate of Allowable Periodic Average future construction cost submitted for authorization.	Y	Y	Y
COASTAL STORM	By project element	Interest During Construction (IDC)	Estimate of interest accumulated during construction(Economic cost)	N	Y	Y
COASTAL STORM	By project element	Operation, Maintenance, Repair, Replacement, and Rehabilitation (OMRR&R)	Annualized estimate of Operation, Maintenance, Replacement and Rehabilitation cost.	N	Y	N
COASTAL STORM		Inflation through midpoint construction	Estimate of inflation using appropriate Civil Works Construction Cost Index System (CWCCIS) factors applied to the Constant Dollar Cost	N	N	Y
COASTAL STORM		Associated and Other Costs	Associated financial costs that are not part of the recommended Federal project but are a necessary non-Federal responsibility. These cost are required to be shown within the Chief's report, as a separate total but are not to be included within the cost shared project cost.	N	Y	Y

Feature Code Definitions

CWBS	Def n t ons
01 Lands and Damages	This feature includes all costs of acquiring for the project (by purchase or condemnation) real property or permanent interests therein, including Government costs, damages, and costs of disposal of real estate. Government costs include planning expenses for the real estate portion of the General Design Memo and for the detailed Real Estate Memo; and project real estate office administration, surveys, and marking for land acquisition purposes and appraisals. For projects which require that costs be incurred on real estate activities, i.e., for records search, appraisals, and field inspection to assure compliance by local interests in the provision of local requirements on projects where no Federal land acquisition is involved, a memorandum statement will be provided with the PB-3 indicating the estimated costs of such real estate activities. These costs will be charged to feature 30, Engineering and Design and that feature will be properly footnoted to show the amount of such costs. A similar footnote will be shown on the PB-1's and PB-2a's for all such projects. This feature is credited with disposal receipts from sale of such items as standing crops, standing timber, structures, and improvements in place and acquired with the land. Disposal receipts from sale of excess land not turned in to the U.S. Treasury as miscellaneous receipts are credited to this feature. Lands or interests purchased for relocations and conveyed to others are included in the feature "Relocations." Temporary interests such as leases are included in the feature or distributive item benefited thereby.
02 Relocations	This feature includes removing and relocating, or reconstructing property of others, such as roads, railroads, cemeteries, utilities, buildings, and other structures; and lands or interests purchased for such relocations and conveyed to others, including real estate planning and acquisition expenses. The cost of removal of improvements from the reservoir area for disposal is included in the feature "Reservoirs." All alterations of railroad bridges in accordance with Section 3 of the 1946 Flood Control Act (22 USC 701p) are also included in this feature.
03 Reservoirs	This feature includes clearing lands in reservoirs and pools of debris, brush, trees, improvements, and structures. Any salvage, obtained by sale or disposal by the Government, of material removed in clearing operations is credited to this feature. This feature also includes bank stabilization, shoreline improvement, firebreaks, fencing, boundary line survey and marking of land which has been acquired or is to be acquired, rehabilitation of natural resources, erosion control, drainage, and rim grouting and mine sealing, etc., to prevent leakage. Site clearing, grouting, etc., incidental to and required for specific construction features is included as part of the construction features.

04 Dams	This feature includes dams and all other water collecting and storage facilities, whether man-made or natural, together with appurtenant diversion, regulation, and delivery facilities and spillways, outlet works, and power intake works, whether separate from the dam or not. In the case where the powerhouse is an integral part of the intake dam, the cost of the power intake dam is included in the feature "Power Plant." Any auxiliary dams or spillways detached from the main structures and floating trash and drift booms and barriers are included in this feature. The power intake works include such power items as forebay, penstocks, tunnels, surge tank, gates, operating equipment, and appurtenances. Service roads and service railroads on the dam are included in this feature. The additional cost of relocating highways and railroads across the dam is included in the feature "Relocations."
05 Locks	This feature includes facilities to provide for passage of waterborne traffic, including gates, valves, operating mechanisms, cribs, fills, lock walls, guide and guard walls, operating buildings, and excavation therefore. The lock structure is considered that part of the work within the limit lines extending from the upper end of the upper guide or guard walls to the lower end of the lower guide or guard walls, including dolphins within the lock approaches for tie up, guard, or guide purposes. Excavation or dredging• required in approaches outside of the limits defined above for the lock structure is included in the feature "Channels and Canals." The cost of a cofferdam or the properly allocable amount thereof, if required, is charged to this feature. Locks provided in connection with facilities for the prevention of encroachment of salt water are included in this feature. Locks in connection with fish facilities are included in the feature "Fish and Wildlife Facilities."
06 Fish and Wildlife Facilities	This feature includes items such as ladders, elevators, locks and related facilities for passage of fish at dams and navigation locks and maintenance of fish runs; and provision for wildlife preservation.
07 Power Plant	This feature includes those facilities specifically required for the production of power other than those included in the feature "Dams," and consists of the following: powerhouse, turbines and governors, generators, accessory electrical equipment, miscellaneous power plant equipment, switchyard, and tailrace improvement for power. In the case where the powerhouse is an integral part of the power intake dam, the cost of the power intake dam is included in this feature. Where the structure of a dam also forms the foundation of the powerhouse, such foundation is considered a part of the dam. Units for production of power for the operation only of power for the operation only of navigation, flood control, or other purpose projects (excluding those projects with power as a feature) are included in other than this feature. The cost of a cofferdam or appropriate part is charged to this feature.
08 Roads, Railroads and Bridges	This feature includes permanent roads, railroads, and bridges required for access and other purposes in connection with the construction and operation of the project. This feature does not include roads, railroads, and bridges chargeable to the feature "Relocations," access roads to recreation facilities and areas, which will be charged to the feature "14. Recreation Facilities," and service roads and service railroads on structures.
09 Channels and Canals	This feature includes all forms of excavation (including dredging, preparation of spoil disposal area, and attendant facilities) necessary for the development and construction of channels, harbors, and canals for navigation purposes; and deepening, providing new, or improving existing watercourses for flood control and major drainage. Excavation of natural watercourse to provide adequate depths for navigation is included. Excavation for specific structures, such as dams and locks used in the development of waterways and conservation of water resources, is included with such structures. The removal of trees, brush, accumulated snags, drift, debris, water hyacinths and other aquatic growths from canals, harbors, and channels in navigable streams and tributaries thereof for navigational included in this feature. Excavation, clearing, and removal of accumulated snags, drifts, debris, and vegetable growth from streams for flood control and major drainage purposes also is included. Included in this feature are revetments, linings, dikes, and bulkheads constructed as channel improvement works for flood control or navigation, as against such items constructed for bank stabilization only. Also included are jetties constructed in connection with flood control channel improvements.
10 Breakwaters and Seawalls	This feature includes breakwaters, seawalls, piers, and like improvements constructed in connection with the protection of beaches, harbors, shores•, and port facilities against the force of waves and encroachment of seas or lakes by direct wave action. Jetties, groins, and like structures provided in seas, lakes, tidewater reaches of rivers and canals, and harbors to control water flow and current, to maintain depth of channels, and to provide protection, are included in this feature.
11 Levees and Floodwalls	This feature includes embankments and walls constructed to protect areas from inundation by overflow from creeks, rivers, lakes, canals, and other bodies of water. This feature consists of such items as: service roads on levee crown or landside berms, road ramps, closure structures, seepage control measures, erosion protection measures on levee slopes and on berms and bank slops when an integral part of the levees or floodwalls; and drainage facilities, constructed to provide means for the passage of accumulated drainage and seepage water and sewage from the protected area over or through levees and floodwalls, comprising such items as interceptor and collection sewers and ditches, and pressurized sewers and drainage structures, including outfalls through levees or floodwalls. Pumping plants are included in the feature "Pumping Plants." Levees locally called dikes are included in this feature.
13 Pumping Plants	This feature includes pumping plants construction to pass accumulated drainage and seepage water and sewage from the protected area over or through levees and floodwalls.
14 Recreation Facilities	This feature includes access roads; parking areas; public camping and picnicking areas, including tables and fireplaces; water supply; sanitary facilities; boat launching ramps; directional signs; and other facilities constructed primarily for public recreational use, including essential safety measures in connection therewith. The latter includes, as appropriate, sheltered anchorage areas for small craft, bathing areas readily accessible and reasonably safe, and safety provisions for visitors and fishermen in the project area. (Boat launching ramps, anchorage areas and beaches should be provided during construction to the extent they will definitely be needed and can be accomplished more economically than at a later date.)
15 Floodway Control and Diversion Structures	This feature includes floodway control and diversion structures to provide for the release of flood waters from streams where discharges exceed flood capacity of the stream, including items such as diversion dams, gated or ungated discharge structures, training walls, stilling basin, and those adjacent embankment sections forming part of the control structure. Construction of channels and levees not forming part of the main control structure, but necessary for operation of such structures is included in the appropriate feature "Channels and Canals" or "Levees and Floodwalls."
16 Bank Stabilization	This feature includes revetments, linings, training dikes, and bulkheads for stabilization of banks of watercourses to prevent erosion, sloughing, or meandering. Bank stabilization constructed in navigation channels or in connection with flood control channel improvement is included in• the feature "Channels and Canals."
17 Beach Replenishment	This feature includes replacement of eroded beaches, for purposes of recreation and shore protection, by direct deposit of materials obtained by dredging or land excavation.
19 Buildings, Grounds and Utilities	This feature includes permanent facilities such as operators' quarters, administration and shop buildings, storage buildings and areas, garage buildings and areas, community buildings, local streets and sidewalks, landscaping, and electric, gas, water, and sewage facilities. Where space in a dam, powerhouse, or other basic structure is used in lieu of construction of any of the above-mentioned buildings, such allocated space is not separated from the basic structure. Communication systems are• included in the feature "Permanent Operating Equipment."
20 Permanent Operating Equipment	This feature includes all project-owned operation and maintenance tools and equipment, such as laboratory, shop, warehousing, communications, and transportation equipment, and office furniture and equipment. The cost of installing sedimentation and degradation measuring facilities, including the surveys requisite to locating and monumenting range layouts, is charged to this feature. •The cost of planning the installation of sedimentation and degradation ranges is charged to the feature "Engineering and Design."
30 Engineering and Design	This feature includes all engineering, design, surveys, preparation of detailed plans and specifications, and related work required for the construction of the project, including relocations. Surveys and planning required in connection with land acquisition are charged to the features "Lands and Damages" or "Relocations," as applicable. Engineering and design performed by hired labor or as a pay item under a contract is included in this feature.
31 Supervision and Administration	This feature includes such functions as inspection, supervision, project office administration, and distributive costs of area office and general overhead charged to the project. Costs for OCE and Division Office Executive Direction and Management are not charged to Construction, General but to the General Expenses appropriation title.

Total Project Cost Summary

B-1. General.

A Total Project Cost Summary (TPCS) is required for all civil works cost estimates submitted for approval at all levels within the U.S. Army Corps of Engineers (Corps). The summary and supporting contract cost sheets are the basis for the official Project Cost Estimate (PB-3) ER 11-2-240. It is a living document, developed from feasibility to project completion to present current working estimate (cost, schedule (escalation), risks (contingencies). The TPCS must consider current escalation tables, which are updated twice annually: March and September.

The TPC reflects all applicable project feature costs, contingencies, escalation to Project First Cost and inflation to Fully Funded Project Costs and is presented in Federal and non-Federal dollars. The TPC emerges when the TPCS form is completed (shown in Figures B-2). The TPCS is a PDT product. While the cost engineer prepares the basic elements of the form, the PM, Real Estate and Construction offices play a major role in establishing Program Year, Federal and non-Federal shares, spent costs, 01 Lands and Damages, 30 PED and 31 Construction Management values.

For the cost engineer, the Total Project Cost form is developed and presented with three different estimates over time: Estimated Cost (Price Level), Project First Cost - Constant Dollar, and Total Project Cost – Fully Funded (reference Figure B-2)

i. Estimated Cost (Effective Price Level) (TPCS columns C through F) is the current developed cost estimate which includes contingencies. The effective price level date for Estimated Cost (shown in DAY MONTH YYYY format) is commonly reported as the previous 1 Oct 20XX to support economic study and escalation to Project First Cost

ii. Project First Cost - Constant Dollar Cost (TPCS columns G through K) is the Estimated Cost then escalated to the PROGRAM YEAR effective price level by applying the appropriate escalation from the CWCCIS tables. The Project First Cost - Constant Dollar (shown in 1 OCT 20XX) is the cost estimate used in feasibility reports and Chief of Engineer's Report (Chief's Report) for Congressional funding requests

iii. Total Project Cost (TPCS columns L through O) is the FULLY FUNDED WITH INFLATION to represent the total cost of the project. The inflation to midpoint of each activity is added from the Project First Cost column set. Total Project Cost (or Total Cost of Construction of GNFs when discussing navigation projects) is the cost estimate used in Project Partnership Agreements and Integral Determination Reports. Total Project Cost is the cost estimate provided to non-Federal sponsors for their use in financial planning as it provides information regarding the overall non-Federal cost

The Project First Cost – Constant Dollar Cost estimate is to be used in the Chief's Reports and other decision documents to support the funding request. The Project First Cost should include, among other things, an estimate of: (i) construction and management costs, including both Federal costs and non-Federal sponsor in-kind contributions, as applicable; (ii) planning engineering and design costs; (iii) lands, easements, rights-of-way, relocations and dredged materials (LERRD) values; and (iv) contingencies. Where several years elapse between the signing of the Chief's Report and the consideration of legislation to authorize a project, the Project First Cost must be updated to reflect the current Project First Cost date for Congressional funding consideration, in accordance with ER 1110-2-1302.

Figure B-1 illustrates the TPC process. Figures B-2 (summary sheet) and B-3 (sample supporting sheet) are examples based upon feasibility estimate reporting requirements in Engineer Regulation (ER) 1105-2-100, Planning Guidance Notebook. "Two project cost estimates shall be displayed in the feasibility report; one based on constant dollars and one based on projected inflation rates." The guidance notebook is referring to the Project First Cost and the Total Project Cost columns J and O. The TPCS (summary sheet) is a signature document for the appropriate district managerial approvals. ER 1105-2-100 states that project cost estimates will be prepared by or reviewed by the cost engineering office in the district and the chief of that office will sign the estimate. Real estate estimates included in the project cost are reviewed, approved, and signed by the chief or designee of the real estate office. Project Management is the third required signature that assumes responsibility for the TPCS value. Figure B-2 also lists other review/approval signatures that may be a district requirement.

Preparing a TPC during the feasibility phase is required, because it is the first document that will show the estimated total project cost at the anticipated authorizing budget year and forecast the total project cost inflated through construction based on the known scope and schedule.

B-2. Sample TPCS (Figure B-2) is in a spreadsheet format beginning with the total project cost summary followed by contract cost summary supporting sheets appearing like Figure B-3. The TPCS template can be downloaded from the Cost MCX website.

B-3. TPCS Form Procedures
a. Estimated Cost (Price Level)
TPCS Headers: Ensure the form presents the formal project name. project number. location. author and date.

Column A: WBS Number – Enter the Civil Works Breakdown code for each feature (refer to the Civil Works Work Breakdown Structure Appendix).

Column B: Civil Works Feature and Sub-Feature Description - For the summary sheet Figure B-2, enter the feature code title. For the supporting sheets like Figure B-3, enter and identify the project phase, contract, etc. as well as the CWWBS description of the item. For Figure B-3, separate lines for the same WBS element may be prudent, pending certain programs or presentations desired. The various phases or contracts on the Figure B-3 sheets is to make distinction between varying schedules of occurrence, associated escalation and risks (contingencies).

The first primary column set, sub columns C through F, is the estimated cost plus contingencies, typically in current or most recent estimated dollars (must be less than 2 years old) that includes all feature accounts: the MCACES construction estimate(s), estimates for lands and damages, preconstruction, engineering and design, and construction management. The following paragraphs are instructions for completing data entry for each scheduled contract (figure B-2 and B-3). Figure B-2 serves as the summary roll-up from the supporting sheets such as Figure B-3.

Column C: COST- Entered in this column are the estimates of those costs that require funding or are remaining costs yet to incur. The costs should reflect the actual estimated costs in $1000s based on the previous October price level that the estimate was prepared. Note: For the Real Estate estimate, ensure the estimate is recent and the contingencies (incremental costs) are separated from the appraisal quote for presentation in the contingency column.

Column D: CNTG (contingency) - This is the dollar amount of contingency determined from a risk-based analysis. It is the result of Column C times the entered contingency percent in Column E or an actual amount determined by a cost risk analysis.

Column E: CNTG % (contingency percentage) - Enter the percentage of contingency (from risk analysis). For 30 and 31 accounts you may want to use the average of the construction element contingencies in lieu of developing a separate contingency. For 01 Lands and Damages, the Chief of Real Estate is responsible to provide a signed estimate of costs and should be able to provide contingency data, also referred to as incremental costs. Ensure that the real estate contingency is separated from the real estate estimate and presented separately as contingency. Contingency is the full dollar value of the various features, converted to a contingency. Reliance solely on a per cent value can induce errors when differing contingency sources such as real estate are also used.

Column F: TOTAL - This is the sum of columns C and D.

b. Project First Cost – Constant Dollar.
The second primary column set is the Project First Cost, also known as the Constant Dollar total. This totaled cost is the one reflected in all Chief's reports for requested funding: effective price level for the year of the Chief's Report submissions. Typically the year of the report submission is the year prior to the anticipated funding. This total can become more complicated for ongoing projects with spent costs that require additional funding.

Column G: - ESC (escalation) This column is the percentage of escalation from the first column set to the PROGRAM YEAR DATE. This moves the estimate cost from the price level when it was prepared to the Program Year price on a constant dollar basis. This escalation is calculated utilizing the Civil Works Construction Cost Index System (CWCCIS) found in EM 1110-2-1304. The CWCCIS is a reflection of the OMB projected rates for future costs, experienced inflation for past costs for each of the Feature categories. The escalation tables are updated twice annually: March and September. To determine the escalation percent, locate the CWCCIS index factors of the Feature account or element for the 1st quarter date of the program year and divide by the index factor of the established or initial estimate date (no less than 2 years old). Subtract value of 1 and multiply by 100 to obtain the percent escalation.

Column H: COST - This is the cost from Column C with the added percent of escalation computed in Column G.

Estimated Cost to Project First Cost

EPL Estimate + Continuency (1 Oct 20XX) Risk Based (Current Dollars)	+	Contingen (risk	x	Cost Index (Budget Yea	=	**Project First Cost Budget Yea**				
				Cost Index (EPL - Current Estimate)		**Constant Dollars**				

Column I: CNTG (contingency) - This is the Contingency value from Column D with the added escalation determined in Column G.
Column J: TOTAL- This is the sum of Columns H and I. This is the constant dollar estimate at PROGRAM YEAR price level, 1 October, also referred to as Project First Cost, excluding any project spent costs. within the Chief's Report. For ongoing projects, the Project First Cost would include Spent Costs to reflect total first costs for the project.
SPENT THRU - Enter the amount of EXPENDED Federal funds for each Feature (this information is commonly obtained from project or program managers. Caution here is advised. If these funds have been expended by a sponsor, but the Government has not yet spent reflective Federal funds, those costs must remain in the Project First Costs, excluding escalation and contingencies. The spent costs of FEDERAL project dollars, already received and expended, is entered as actual amount spent in the year it was spent. The year of the expenditure must exclude inflation and contingencies because no further inflation or risks on these costs can occur This is entered on the TPCS (figure B- 2) (PAGE 1) only
c. Total Project Cost (Fully Funded with Inflation).
The third primary column of the TPCS is the total project cost estimate inflated through project completion, which is the second cost estimate referred to from the Planning Guidance Notebook. For financial analysis, an inflated dollar basis is to be used for the sponsor's information. Reasonably accurate and complete cost estimates and schedules are necessary for the Federal Government and the non-Federal sponsors to make prudent financial and budgetary decisions in obtaining and expending funds
The project schedule is used to forecast when project elements will begin and the duration of each element. Knowing how each activity/element is funded and its respective duration will illustrate when the costs are expected to occur. In cases where multiple construction contracts or phases are planned, each should be addressed separately to present a more realistic escalation to design and construction midpoints for each contract. It is recommended that separate contracts be presented as a subset spreadsheet with values that roll up to the summary level total (Figure B-1).

Column L: INFLATED – This is the inflation percentage from PROGRAM YEAR price level to the MIDPOINT of the performance period of each Feature item. Midpoint dates are determined from the Project Schedule. The amount shown in the column is the percentage of increase.
For construction contracts and other project elements having a relatively short duration, choosing an index coinciding with the midpoint of the duration may be adequate to escalate the costs for inflation. Also, activities/elements that are primarily level of effort, where costs are relatively consistent throughout the duration, a date at the midpoint of the duration is usually adequate to select the CWCCIS index to inflate the activity/element cost.

Project First Cost

Budget Year x

Constant Dollars

Cost Index (Midpt of Activity	=	**ully Funded**				
Cost Index (Budget) (Year)						

m. Column M: COST- Is the cost from Column H with midpoint inflation added from the CWCCIS calculations (column L).

n. Column N: CNTG (contingency) - This is the Contingency dollar value from Column I with the added inflation factor (column L).
o. Column O: FULL (fully funded amount) Is the fully funded estimate amount for the Item (Column M + Column N + Spent Costs). The overall summation of column O on the TPCS (Figure B-2) is the TOTAL PROJECT COST ESTIMATE inflated through the Project Schedule midpoint for each separate activity.
o. Column P: Found on the succeeding sheets. such as Figure B-3. for the TPC summary. the column presents the midpoint date for the inflated value for each Feature.

The costs of water resources studies and projects developed by the Corps are shared between Federal and non-Federal entities as defined in laws and administrative provisions. The Water Resources Development Act of 1986, established new cost sharing rules for all studies and projects conducted by the Corps. The cost sharing provisions of the Water Resources Development Act of 1986 place greater financial responsibilities on non-Federal sponsors of Corps projects. The amount of non-Federal share varies depending upon the project purpose and the general and specific laws that apply to each project. Coordination with Project and Program Management is required to clarify this share percentage. Cost sharing can and does change over time.

The total project cost inflated through construction is divided into Federal cost and non-Federal cost. The non-Federal cost is for the sponsor's information and financial analysis. The cost engineer must coordinate with the project manager to determine the appropriate cost sharing percentages applicable to the project. To illustrate, the cost of feasibility studies is shared equally (50/50) and the remaining project cost may be shared 25 percent non-Federal cost and 75 percent Federal cost. Guidance on cost sharing for each civil works mission and authority is presented in ER 1105-2-100 and coordination with the project manager is necessary.
B-4. Section 902 Project Cost Limit.
When appropriate for authorized projects spanning several years, the TPCS is updated annually for comparison to the Section 902 project cost limit. It can be computed and presented on the updated TPCS to serve as a current working estimate.
The maximum project cost limit imposed by Section 902 is a numerical value specified by law, which must be computed in a legally supportable manner. It is not an estimate of the current cost of the project. The construction component of the authorized cost will be updated to account for current scope, quantities, costs, schedules and risks and applying escalation using the current CWCCIS escalation tables. The real estate component of the authorized cost will be updated to account for historical inflation based on changes to the Consumer Price Index. ER 1105-2-100, appendix G paragraph G-15a provides detailed guidance on the calculations necessary to determine the numerical value

Estimated Cost (Price Level) is the initially developed cost estimate which includes contingencies. The effective price level date for Estimated Cost (shown in MONTH YYYY format) is usually the date of preparation of the cost estimate.

Project First Cost (Constant Dollar Cost) (Price Level) is the Estimated Cost BROUGHT TO THE EFFECTIVE PRICE LEVEL. The effective price level for Constant Dollar Cost (shown in MONTH YYYY format) is the date of the common point in time of the pricing used in the cost estimate. Constant Dollar Cost does not include inflation. Constant Dollar Cost at current price levels is the cost estimate used in feasibility reports and Chief's Reports (see paragraphs 5(a) and 5(b) below). THE CONSTANT DOLLAR COST SHOULD BE EXPRESSED AS THE FY OF THE CHIEF'S REPORT TO ENSURE THAT THE CW PROGRAM TOTALS IN ONE FY DOLLAR TO ASA AND CONGRESS.

Total Project Cost is the Constant Dollar Cost FULLY FUNDED WITH ESCALATION to the estimated midpoint of construction. Total Project Cost (or Total Cost of Construction of GNFs when discussing navigation projects) is the cost estimate used in Project Partnership Agreements and Integral Determination Reports. Total Project Cost is the cost estimate provided non-Federal sponsors for their use in financial planning as it provides information regarding the overall non-Federal cost sharing obligation. See the enclosed tables for more detail of what is or is not included in the Total Project Cost.

Type of Program	CWBS*	Pro ect Cost Component**	Br ef Def n t on	For Chief s Report		For PPA s
				Project F rst Cost Constant Cost Estimate Oct (YYYY) Pr ce Level	Econom c Cost for BCR	Tota Pro ect Cost Fu y Funded Cost Estimate
Flood Risk Management	01,02	Lands, Easements, Rights of Way, Relocations, and Dredged Material Disposal Areas (LERRD).	Estimated value/costs of LERRD for the project (to include breakout of related Federal administrative costs).	Y	Y	Y
Flood Risk Management	02 - 20	Construction Elements	Physical Construction cost estimate broken out by Civil Works Breakdown Structure(CWBS).	Y	Y	Y
Flood Risk Management	30	Planning, Engineering, and Design (post feasibility work)	Estimated costs for post feasibility planning, engineering, and design for the project. COASTAL STORM	By project element	Monitoring and Adaptive Management	This represents the estimated costs of monitoring and or adaptive management to be cost shared for the project.	Y	Y	Y
COASTAL STORM	By project element	Contingency	This is the Risk Based contingency established for the project.	Y	Y	Y
COASTAL STORM	By project element	Continued Construction (periodic nourishment)	For Hurricane and Storm Damage Reduction Only: Estimate of Allowable Periodic Average future construction cost submitted for authorization.	Y	Y	Y
COASTAL STORM	By project element	Interest During Construction (IDC)	Estimate of interest accumulated during construction(Economic cost)	N	Y	Y
COASTAL STORM	By project element	Operation, Maintenance, Repair, Replacement, and Rehabilitation (OMRR&R)	Annualized estimate of Operation, Maintenance, Replacement and Rehabilitation cost.	N	Y	N
COASTAL STORM		Inflation through midpoint construction	Estimate of inflation using appropriate Civil Works Construction Cost Index System (CWCCIS) factors applied to the Constant Dollar Cost	N	N	Y
COASTAL STORM		Associated and Other Costs	Associated financial costs that are not part of the recommended Federal project but are a necessary non-Federal responsibility. These cost are required to be shown within the Chief's report, as a separate total but are not to be included within the cost shared project cost.	N	Y	Y

Feature Code Definitions

CWBS	Def n t ons
01 Lands and Damages	This feature includes all costs of acquiring for the project (by purchase or condemnation) real property or permanent interests therein, including Government costs, damages, and costs of disposal of real estate. Government costs include planning expenses for the real estate portion of the General Design Memo and for the detailed Real Estate Memo; and project real estate office administration, surveys, and marking for land acquisition purposes and appraisals. For projects which require that costs be incurred on real estate activities, i.e., for records search, appraisals, and field inspection to assure compliance by local interests in the provision of local requirements on projects where no Federal land acquisition is involved, a memorandum statement will be provided with the PB-3 indicating the estimated costs of such real estate activities. These costs will be charged to feature 30, Engineering and Design and that feature will be properly footnoted to show the amount of such costs. A similar footnote will be shown on the PB-1's and PB-2a's for all such projects. This feature is credited with disposal receipts from sale of such items as standing crops, standing timber, structures, and improvements in place and acquired with the land. Disposal receipts from sale of excess land not turned in to the U.S. Treasury as miscellaneous receipts are credited to this feature. Lands or interests purchased for relocations and conveyed to others are included in the feature "Relocations." Temporary interests such as leases are included in the feature or distributive item benefited thereby.
02 Relocations	This feature includes removing and relocating, or reconstructing property of others, such as roads, railroads, cemeteries, utilities, buildings, and other structures; and lands or interests purchased for such relocations and conveyed to others, including real estate planning and acquisition expenses. The cost of removal of improvements from the reservoir area for disposal is included in the feature "Reservoirs." All alterations of railroad bridges in accordance with Section 3 of the 1946 Flood Control Act (22 USC 701p) are also included in this feature.
03 Reservoirs	This feature includes clearing lands in reservoirs and pools of debris, brush, trees, improvements, and structures. Any salvage, obtained by sale or disposal by the Government, of material removed in clearing operations is credited to this feature. This feature also includes bank stabilization, shoreline improvement, firebreaks, fencing, boundary line survey and marking of land which has been acquired or is to be acquired, rehabilitation of natural resources, erosion control, drainage, and rim grouting and mine sealing, etc., to prevent leakage. Site clearing, grouting, etc., incidental to and required for specific construction features is included as part of the construction features.

04 Dams	This feature includes dams and all other water collecting and storage facilities, whether man-made or natural, together with appurtenant diversion, regulation, and delivery facilities and spillways, outlet works, and power intake works, whether separate from the dam or not. In the case where the powerhouse is an integral part of the intake dam, the cost of the power intake dam is included in the feature "Power Plant." Any auxiliary dams or spillways detached from the main structures and floating trash and drift booms and barriers are included in this feature. The power intake works include such power items as forebay, penstocks, tunnels, surge tank, gates, operating equipment, and appurtenances. Service roads and service railroads on the dam are included in this feature. The additional cost of relocating highways and railroads across the dam is included in the feature "Relocations."
05 Locks	This feature includes facilities to provide for passage of waterborne traffic, including gates, valves, operating mechanisms, cribs, fills, lock walls, guide and guard walls, operating buildings, and excavation therefore. The lock structure is considered that part of the work within the limit lines extending from the upper end of the upper guide or guard walls to the lower end of the lower guide or guard walls, including dolphins within the lock approaches for tie up, guard, or guide purposes. Excavation or dredging• required in approaches outside of the limits defined above for the lock structure is included in the feature "Channels and Canals." The cost of a cofferdam or the properly allocable amount thereof, if required, is charged to this feature. Locks provided in connection with facilities for the prevention of encroachment of salt water are included in this feature. Locks in connection with fish facilities are included in the feature "Fish and Wildlife Facilities."
06 Fish and Wildlife Facilities	This feature includes items such as ladders, elevators, locks and related facilities for passage of fish at dams and navigation locks and maintenance of fish runs; and provision for wildlife preservation.
07 Power Plant	This feature includes those facilities specifically required for the production of power other than those included in the feature "Dams," and consists of the following: powerhouse, turbines and governors, generators, accessory electrical equipment, miscellaneous power plant equipment, switchyard, and tailrace improvement for power. In the case where the powerhouse is an integral part of the power intake dam, the cost of the power intake dam is included in this feature. Where the structure of a dam also forms the foundation of the powerhouse, such foundation is considered a part of the dam. Units for production of power for the operation only of power for the operation only of navigation, flood control, or other purpose projects (excluding those projects with power as a feature) are included in other than this feature. The cost of a cofferdam or appropriate part is charged to this feature.
08 Roads, Railroads and Bridges	This feature includes permanent roads, railroads, and bridges required for access and other purposes in connection with the construction and operation of the project. This feature does not include roads, railroads, and bridges chargeable to the feature "Relocations," access roads to recreation facilities and areas, which will be charged to the feature "14. Recreation Facilities," and service roads and service railroads on structures.
09 Channels and Canals	This feature includes all forms of excavation (including dredging, preparation of spoil disposal area, and attendant facilities) necessary for the development and construction of channels, harbors, and canals for navigation purposes; and deepening, providing new, or improving existing watercourses for flood control and major drainage. Excavation of natural watercourse to provide adequate depths for navigation is included. Excavation for specific structures, such as dams and locks used in the development of waterways and conservation of water resources, is included with such structures. The removal of trees, brush, accumulated snags, drift, debris, water hyacinths and other aquatic growths from canals, harbors, and channels in navigable streams and tributaries thereof for navigational included in this feature. Excavation, clearing, and removal of accumulated snags, drifts, debris, and vegetable growth from streams for flood control and major drainage purposes also is included. Included in this feature are revetments, linings, dikes, and bulkheads constructed as channel improvement works for flood control or navigation, as against such items constructed for bank stabilization only. Also included are jetties constructed in connection with flood control channel improvements.
10 Breakwaters and Seawalls	This feature includes breakwaters, seawalls, piers, and like improvements constructed in connection with the protection of beaches, harbors, shores•, and port facilities against the force of waves and encroachment of seas or lakes by direct wave action. Jetties, groins, and like structures provided in seas, lakes, tidewater reaches of rivers and canals, and harbors to control water flow and current, to maintain depth of channels, and to provide protection, are included in this feature.
11 Levees and Floodwalls	This feature includes embankments and walls constructed to protect areas from inundation by overflow from creeks, rivers, lakes, canals, and other bodies of water. This feature consists of such items as: service roads on levee crown or landside berms, road ramps, closure structures, seepage control measures, erosion protection measures on levee slopes and on berms and bank slops when an integral part of the levees or floodwalls; and drainage facilities, constructed to provide means for the passage of accumulated drainage and seepage water and sewage from the protected area over or through levees and floodwalls, comprising such items as interceptor and collection sewers and ditches, and pressurized sewers and drainage structures, including outfalls through levees or floodwalls. Pumping plants are included in the feature "Pumping Plants." Levees locally called dikes are included in this feature.
13 Pumping Plants	This feature includes pumping plants construction to pass accumulated drainage and seepage water and sewage from the protected area over or through levees and floodwalls.
14 Recreation Facilities	This feature includes access roads; parking areas; public camping and picnicking areas, including tables and fireplaces; water supply; sanitary facilities; boat launching ramps; directional signs; and other facilities constructed primarily for public recreational use, including essential safety measures in connection therewith. The latter includes, as appropriate, sheltered anchorage areas for small craft, bathing areas readily accessible and reasonably safe, and safety provisions for visitors and fishermen in the project area. (Boat launching ramps, anchorage areas and beaches should be provided during construction to the extent they will definitely be needed and can be accomplished more economically than at a later date.)
15 Floodway Control and Diversion Structures	This feature includes floodway control and diversion structures to provide for the release of flood waters from streams where discharges exceed flood capacity of the stream, including items such as diversion dams, gated or ungated discharge structures, training walls, stilling basin, and those adjacent embankment sections forming part of the control structure. Construction of channels and levees not forming part of the main control structure, but necessary for operation of such structures is included in the appropriate feature "Channels and Canals" or "Levees and Floodwalls."
16 Bank Stabilization	This feature includes revetments, linings, training dikes, and bulkheads for stabilization of banks of watercourses to prevent erosion, sloughing, or meandering. Bank stabilization constructed in navigation channels or in connection with flood control channel improvement is included in• the feature "Channels and Canals."
17 Beach Replenishment	This feature includes replacement of eroded beaches, for purposes of recreation and shore protection, by direct deposit of materials obtained by dredging or land excavation.
19 Buildings, Grounds and Utilities	This feature includes permanent facilities such as operators' quarters, administration and shop buildings, storage buildings and areas, garage buildings and areas, community buildings, local streets and sidewalks, landscaping, and electric, gas, water, and sewage facilities. Where space in a dam, powerhouse, or other basic structure is used in lieu of construction of any of the above-mentioned buildings, such allocated space is not separated from the basic structure. Communication systems are• included in the feature "Permanent Operating Equipment."
20 Permanent Operating Equipment	This feature includes all project-owned operation and maintenance tools and equipment, such as laboratory, shop, warehousing, communications, and transportation equipment, and office furniture and equipment. The cost of installing sedimentation and degradation measuring facilities, including the surveys requisite to locating and monumenting range layouts, is charged to this feature. •The cost of planning the installation of sedimentation and degradation ranges is charged to the feature "Engineering and Design."
30 Engineering and Design	This feature includes all engineering, design, surveys, preparation of detailed plans and specifications, and related work required for the construction of the project, including relocations. Surveys and planning required in connection with land acquisition are charged to the features "Lands and Damages" or "Relocations," as applicable. Engineering and design performed by hired labor or as a pay item under a contract is included in this feature.
31 Supervision and Administration	This feature includes such functions as inspection, supervision, project office administration, and distributive costs of area office and general overhead charged to the project. Costs for OCE and Division Office Executive Direction and Management are not charged to Construction, General but to the General Expenses appropriation title.

Total Project Cost Summary

B-1. General.

A Total Project Cost Summary (TPCS) is required for all civil works cost estimates submitted for approval at all levels within the U.S. Army Corps of Engineers (Corps). The summary and supporting contract cost sheets are the basis for the official Project Cost Estimate (PB-3) ER 11-2-240. It is a living document, developed from feasibility to project completion to present current working estimate (cost, schedule (escalation), risks (contingencies). The TPCS must consider current escalation tables, which are updated twice annually: March and September.

The TPC reflects all applicable project feature costs, contingencies, escalation to Project First Cost and inflation to Fully Funded Project Costs and is presented in Federal and non-Federal dollars. The TPC emerges when the TPCS form is completed (shown in Figures B-2). The TPCS is a PDT product. While the cost engineer prepares the basic elements of the form, the PM, Real Estate and Construction offices play a major role in establishing Program Year, Federal and non-Federal shares, spent costs, 01 Lands and Damages, 30 PED and 31 Construction Management values.

For the cost engineer, the Total Project Cost form is developed and presented with three different estimates over time: Estimated Cost (Price Level), Project First Cost - Constant Dollar, and Total Project Cost – Fully Funded (reference Figure B-2)

i. Estimated Cost (Effective Price Level) (TPCS columns C through F) is the current developed cost estimate which includes contingencies. The effective price level date for Estimated Cost (shown in DAY MONTH YYYY format) is commonly reported as the previous 1 Oct 20XX to support economic study and escalation to Project First Cost

ii. Project First Cost - Constant Dollar Cost (TPCS columns G through K) is the Estimated Cost then escalated to the PROGRAM YEAR effective price level by applying the appropriate escalation from the CWCCIS tables. The Project First Cost - Constant Dollar (shown in 1 OCT 20XX) is the cost estimate used in feasibility reports and Chief of Engineer's Report (Chief's Report) for Congressional funding requests

iii. Total Project Cost (TPCS columns L through O) is the FULLY FUNDED WITH INFLATION to represent the total cost of the project. The inflation to midpoint of each activity is added from the Project First Cost column set. Total Project Cost (or Total Cost of Construction of GNFs when discussing navigation projects) is the cost estimate used in Project Partnership Agreements and Integral Determination Reports. Total Project Cost is the cost estimate provided to non-Federal sponsors for their use in financial planning as it provides information regarding the overall non-Federal cost

The Project First Cost – Constant Dollar Cost estimate is to be used in the Chief's Reports and other decision documents to support the funding request. The Project First Cost should include, among other things, an estimate of: (i) construction and management costs, including both Federal costs and non-Federal sponsor in-kind contributions, as applicable; (ii) planning engineering and design costs; (iii) lands, easements, rights-of-way, relocations and dredged materials (LERRD) values; and (iv) contingencies. Where several years elapse between the signing of the Chief's Report and the consideration of legislation to authorize a project, the Project First Cost must be updated to reflect the current Project First Cost date for Congressional funding consideration, in accordance with ER 1110-2-1302.

Figure B-1 illustrates the TPC process. Figures B-2 (summary sheet) and B-3 (sample supporting sheet) are examples based upon feasibility estimate reporting requirements in Engineer Regulation (ER) 1105-2-100, Planning Guidance Notebook. "Two project cost estimates shall be displayed in the feasibility report; one based on constant dollars and one based on projected inflation rates." The guidance notebook is referring to the Project First Cost and the Total Project Cost columns J and O. The TPCS (summary sheet) is a signature document for the appropriate district managerial approvals. ER 1105-2-100 states that project cost estimates will be prepared by or reviewed by the cost engineering office in the district and the chief of that office will sign the estimate. Real estate estimates included in the project cost are reviewed, approved, and signed by the chief or designee of the real estate office. Project Management is the third required signature that assumes responsibility for the TPCS value. Figure B-2 also lists other review/approval signatures that may be a district requirement.

Preparing a TPC during the feasibility phase is required, because it is the first document that will show the estimated total project cost at the anticipated authorizing budget year and forecast the total project cost inflated through construction based on the known scope and schedule.

B-2. Sample TPCS (Figure B-2) is in a spreadsheet format beginning with the total project cost summary followed by contract cost summary supporting sheets appearing like Figure B-3. The TPCS template can be downloaded from the Cost MCX website.

B-3. TPCS Form Procedures
a. Estimated Cost (Price Level)
TPCS Headers: Ensure the form presents the formal project name. project number. location. author and date.

Column A: WBS Number – Enter the Civil Works Breakdown code for each feature (refer to the Civil Works Work Breakdown Structure Appendix).

Column B: Civil Works Feature and Sub-Feature Description - For the summary sheet Figure B-2, enter the feature code title. For the supporting sheets like Figure B-3, enter and identify the project phase, contract, etc. as well as the CWWBS description of the Item. For Figure B-3, separate lines for the same WBS element may be prudent, pending certain programs or presentations desired. The various phases or contracts on the Figure B-3 sheets is to make distinction between varying schedules of occurrence, associated escalation and risks (contingencies).

The first primary column set, sub columns C through F, is the estimated cost plus contingencies, typically in current or most recent estimated dollars (must be less than 2 years old) that includes all feature accounts: the MCACES construction estimate(s), estimates for lands and damages, preconstruction, engineering and design, and construction management. The following paragraphs are instructions for completing data entry for each scheduled contract (figure B-2 and B-3). Figure B-2 serves as the summary roll-up from the supporting sheets such as Figure B-3.

Column C: COST- Entered in this column are the estimates of those costs that require funding or are remaining costs yet to incur. The costs should reflect the actual estimated costs in $1000s based on the previous October price level that the estimate was prepared. Note: For the Real Estate estimate, ensure the estimate is recent and the contingencies (incremental costs) are separated from the appraisal quote for presentation in the contingency column.

Column D: CNTG (contingency) - This is the dollar amount of contingency determined from a risk-based analysis. It is the result of Column C times the entered contingency percent in Column E or an actual amount determined by a cost risk analysis.

Column E: CNTG % (contingency percentage) - Enter the percentage of contingency (from risk analysis). For 30 and 31 accounts you may want to use the average of the construction element contingencies in lieu of developing a separate contingency. For 01 Lands and Damages, the Chief of Real Estate is responsible to provide a signed estimate of costs and should be able to provide contingency data, also referred to as incremental costs. Ensure that the real estate contingency is separated from the real estate estimate and presented separately as contingency. Contingency is the full dollar value of the various features, converted to a contingency. Reliance solely on a per cent value can induce errors when differing contingency sources such as real estate are also used.

Column F: TOTAL - This is the sum of columns C and D.

b. Project First Cost – Constant Dollar.
The second primary column set is the Project First Cost, also known as the Constant Dollar total. This totaled cost is the one reflected in all Chief's reports for requested funding: effective price level for the year of the Chief's Report submissions. Typically the year of the report submission is the year prior to the anticipated funding. This total can become more complicated for ongoing projects with spent costs that require additional funding.

Column G: - ESC (escalation) This column is the percentage of escalation from the first column set to the PROGRAM YEAR DATE. This moves the estimate cost from the price level when it was prepared to the Program Year price on a constant dollar basis. This escalation is calculated utilizing the Civil Works Construction Cost Index System (CWCCIS) found in EM 1110-2-1304. The CWCCIS is a reflection of the OMB projected rates for future costs, experienced inflation for past costs for each of the Feature categories. The escalation tables are updated twice annually: March and September. To determine the escalation percent, locate the CWCCIS index factors of the Feature account or element for the 1st quarter date of the program year and divide by the index factor of the established or initial estimate date (no less than 2 years old). Subtract value of 1 and multiply by 100 to obtain the percent escalation.

Column H: COST - This is the cost from Column C with the added percent of escalation computed in Column G.

Estimated Cost to Project First Cost

EPL Estimate + Continuency (1 Oct 20XX) **Risk Based** (Current Dollars) + Contingency (TPCS Column D) x [Cost Index (Budget Year) / Cost Index (EPL - Current Estimate)] = **Project First Cost Budget Year Constant Dollars**

Column I: CNTG (contingency) - This is the Contingency value from Column D with the added escalation determined in Column G.
Column J: TOTAL- This is the sum of Columns H and I. This is the constant dollar estimate at PROGRAM YEAR price level, 1 October, also referred to as Project First Cost, excluding any project spent costs. within the Chief's Report. For ongoing projects, the Project First Cost would include Spent Costs to reflect total first costs for the project.
SPENT THRU - Enter the amount of EXPENDED Federal funds for each Feature (this information is commonly obtained from project or program managers. Caution here is advised. If these funds have been expended by a sponsor, but the Government has not yet spent reflective Federal funds, those costs must remain in the Project First Costs, excluding escalation and contingencies. The spent costs of FEDERAL project dollars, already received and expended, is entered as actual amount spent in the year it was spent. The year of the expenditure must exclude inflation and contingencies because no further inflation or risks on these costs can occur. This is entered on the TPCS (figure B- 2) (PAGE 1) only.

c. Total Project Cost (Fully Funded with Inflation).
The third primary column of the TPCS is the total project cost estimate inflated through project completion, which is the second cost estimate referred to from the Planning Guidance Notebook. For financial analysis, an inflated dollar basis is to be used for the sponsor's information. Reasonably accurate and complete cost estimates and schedules are necessary for the Federal Government and the non-Federal sponsors to make prudent financial and budgetary decisions in obtaining and expending funds.
The project schedule is used to forecast when project elements will begin and the duration of each element. Knowing how each activity/element is funded and its respective duration will illustrate when the costs are expected to occur. In cases where multiple construction contracts or phases are planned, each should be addressed separately to present a more realistic escalation to design and construction midpoints for each contract. It is recommended that separate contracts be presented as a subset spreadsheet with values that roll up to the summary level total (Figure B-3).

Column L: INFLATED – This is the inflation percentage from PROGRAM YEAR price level to the MIDPOINT of the performance period of each Feature Item. Midpoint dates are determined from the Project Schedule. The amount shown in the column is the percentage of increase.
For construction contracts and other project elements having a relatively short duration, choosing an index coinciding with the midpoint of the duration may be adequate to escalate the costs for inflation. Also, activities/elements that are primarily level of effort, where costs are relatively consistent throughout the duration, a date at the midpoint of the duration is usually adequate to select the CWCCIS index to inflate the activity/element cost.

Project First Cost
Budget Year x [Cost Index (Midpt of Budget Year) / Cost Index (Budget Year)] = **ully Funded**
Constant Dollars

m. Column M: COST- Is the cost from Column H with midpoint inflation added from the CWCCIS calculations (column L).

n. Column N: CNTG (contingency) - This is the Contingency dollar value from Column I with the added inflation factor (column L).
o. Column O: FULL (fully funded amount) Is the fully funded estimate amount for the Item (Column M + Column N + Spent Costs). The overall summation of column O on the TPCS (Figure B-2) is the TOTAL PROJECT COST ESTIMATE inflated through the Project Schedule midpoint for each separate activity.
o. Column P: Found on the supporting sheets. such as Figure B-3. for the TPC summary. the column presents the midpoint date for the inflated value for each Feature.

The costs of water resources studies and projects developed by the Corps are shared between Federal and non-Federal entities as defined in laws and administrative provisions. The Water Resources Development Act of 1986, established new cost sharing rules for all studies and projects conducted by the Corps. The cost sharing provisions of the Water Resources Development Act of 1986 place greater financial responsibilities on non-Federal sponsors of Corps projects. The amount of non-Federal share varies depending upon the project purpose and the general and specific laws that apply to each project. Coordination with Project and Program Management is required to clarify this share percentage. Cost sharing can and does change over time.

The total project cost inflated through construction is divided into Federal cost and non-Federal cost. The non-Federal cost is for the sponsor's information and financial analysis. The cost engineer must coordinate with the project manager to determine the appropriate cost sharing percentages applicable to the project. To illustrate, the cost of feasibility studies is shared equally (50/50) and the remaining project cost may be shared 25 percent non-Federal cost and 75 percent Federal cost. Guidance on cost sharing for each civil works mission and authority is presented in ER 1105-2-100 and coordination with the project manager is necessary.

B-4. Section 902 Project Cost Limit.
When appropriate for authorized projects spanning several years, the TPCS is updated annually for comparison to the Section 902 project cost limit. It can be computed and presented on the updated TPCS to serve as a current working estimate.
The maximum project cost limit imposed by Section 902 is a numerical value specified by law, which must be computed in a legally supportable manner. It is not an estimate of the current cost of the project. The construction component of the authorized cost will be updated to account for current scope, quantities, costs, schedules and risks and applying escalation using the current CWCCIS escalation tables. The real estate component of the authorized cost will be updated to account for historical inflation based on changes to the Consumer Price Index. ER 1105-2-100, appendix G, paragraph G-19a provides detailed guidance on the calculations necessary to determine the numerical value.

Estimated Cost (Price Level) is the initially developed cost estimate which includes contingencies. The effective price level date for Estimated Cost (shown in MONTH YYYY format) is usually the date of preparation of the cost estimate.

Project First Cost (Constant Dollar Cost) (Price Level) is the Estimated Cost BROUGHT TO THE EFFECTIVE PRICE LEVEL. The effective price level for Constant Dollar Cost (shown in MONTH YYYY format) is the date of the common point in time of the pricing used in the cost estimate. Constant Dollar Cost does not include inflation. Constant Dollar Cost at current price levels is the cost estimate used in feasibility reports and Chief's Reports (see paragraphs 5(a) and 5(b) below). THE CONSTANT DOLLAR COST SHOULD BE EXPRESSED AS THE FY OF THE CHIEF'S REPORT TO ENSURE THAT THE CW PROGRAM TOTALS IN ONE FY DOLLAR TO ASA AND CONGRESS.

Total Project Cost is the Constant Dollar Cost FULLY FUNDED WITH ESCALATION to the estimated midpoint of construction. Total Project Cost (or Total Cost of Construction of GNFs when discussing navigation projects) is the cost estimate used in Project Partnership Agreements and Integral Determination Reports. Total Project Cost is the cost estimate provided non-Federal sponsors for their use in financial planning as it provides information regarding the overall non-Federal cost sharing obligation. See the enclosed tables for more detail of what is or is not included in the Total Project Cost.

Flood Risk Management	By project element	Associated and Other Costs	Associated financial costs that are not part of the recommended Federal project but are a necessary non-Federal responsibility. These cost are required to be shown within the Chief's report, as a separate total but are not to be included within cost shared project cost	N	Y	Y
Ecosystem Restoration	01,02	Lands, Easements, Rights of Way, Relocations, and Dredged Material Disposal Areas (LERRD). This includes related Federal administrative costs.	Estimated value/costs of LERRD for the project (to include breakout of related Federal administrative costs).	Y	Y	Y
Ecosystem Restoration	03 - 20	Construction Elements	Physical Construction cost estimate broken out by Civil Works Breakdown Structure(CWBS).	Y	Y	Y
Ecosystem Restoration	30	Planning, Engineering, and Design (post feasibility work)	Estimated costs for post feasibility planning, engineering, and design for the project. This cost should include the estimate of Preconstruction Engineering and Design (PED) phase costs as well as the planning, engineering, and design costs during the construction phase to complete the project.	Y	Y	Y
Ecosystem Restoration	31	Construction Management	Estimated costs for construction management of project	Y	Y	Y
Ecosystem Restoration		Fish and Wildlife Mitigation	Estimated costs of Mitigation	Y	Y	Y
Ecosystem Restoration	18	Cultural Mitigation	Estimated costs of Mitigation	Y	Y***	Y
Ecosystem Restoration	By project element	Monitoring and Adaptive Management	This represents the estimated costs of monitoring and or adaptive management to be cost shared for the project.	Y	Y	Y
Ecosystem Restoration	By project element	Contingency	This is the Risk Based contingency established for the project.	Y	Y	Y
Ecosystem Restoration	By project element	Interest During Construction (IDC)	Estimate of interest accumulated during construction(Economic cost)	N	Y	Y
Ecosystem Restoration	By project element	Operation, Maintenance, Repair, Replacement, and Rehabilitation (OMRR&R)	Annualized estimate of Operation, Maintenance, Replacement and Rehabilitation cost.	N	Y	N
Ecosystem Restoration	By project element	Inflation through midpoint construction	Estimate of inflation using appropriate Civil Works Construction Cost Index System (CWCCIS) factors applied to the Constant Dollar Cost	N	N	Y
Ecosystem Restoration		Associated and Other Costs	Associated financial costs that are not part of the recommended Federal project but are a necessary non-Federal responsibility. These cost are required to be shown within the Chief's report, as a separate total but are not to be included within the cost shared project cost	N	Y	Y
Navigation and Harbors	01,02	Lands, Easements, Rights of Way, Relocations (LERR). This includes related Federal costs.	Estimated value/costs of LERR (to include breakout of related Federal administrative costs).	Y	Y	Y
Navigation and Harbors	03 - 20	Construction Elements (General Navigation Features)	Physical Construction cost estimate broken out by Civil Works Breakdown Structure(CWBS).	Y	Y	Y
Navigation and Harbors	30	Planning, Engineering, and Design (post feasibility work)	Estimated costs for post feasibility planning, engineering, and design for the project. This cost should include the estimate of Preconstruction Engineering and Design (PED) phase costs as well as the planning, engineering, and design costs during the construction phase to complete the project.	Y	Y	Y
Navigation and Harbors	31	Construction Management	Estimated costs for construction management of project	Y	Y	Y
Navigation and Harbors		Fish and Wildlife Mitigation	Estimated costs of Mitigation	Y	Y	Y
Navigation and Harbors	18	Cultural Mitigation	Estimated costs of Mitigation	Y	Y***	Y
Navigation and Harbors	By project element	Contingency	This is the Risk Based contingency established for the project.	Y	Y	Y
Navigation and Harbors	By project element	Interest During Construction (IDC)	Estimate of interest accumulated during construction(Economic cost)	N	Y	Y

Navigation and Harbors	By project element	Operation, Maintenance, Repair, Replacement, and Rehabilitation (OMRR&R)	Annualized estimate of Operation, Maintenance, Replacement and Rehabilitation cost.	N	Y	N
Navigation and Harbors	By project element	Inflation through midpoint construction	Estimate of inflation using appropriate Civil Works Construction Cost Index System (CWCCIS) factors applied to the Constant Dollar Cost	N	N	Y
Navigation and Harbors	By project element	Local Service Facilities (LSF)	For Navigation Only: This represents the estimated cost of Local Service Facilities as defined in the Planning Guidance Notebook Appendix E. These are the responsibility of the non-Federal entity and are required as part of the PCA if	N	Y	Y
Navigation and Harbors		Associated and Other Costs	Associated financial costs that are not part of the recommended Federal project but are a necessary non-Federal responsibility. These cost are required to be shown within the Chief's report, as a separate total but are not to be included within the cost shared project cost.	N	Y	Y
Inland Navigation	01,02	Lands, Easements, Rights of Way, Relocations, and Dredged Material Disposal Areas (LERRD). This includes related Federal administrative costs.	Estimated value/costs of LERRD for the project (to include breakout of related Federal administrative costs).	Y	Y	Y
Inland Navigation	03 - 20	Construction Elements (General Navigation Features)	Physical Construction cost estimate broken out by Civil Works Breakdown Structure(CWBS).	Y	Y	Y
Inland Navigation	30	Planning, Engineering, and Design (post feasibility work)	Estimated costs for post feasibility planning, engineering, and design for the project. This cost should include the estimate of Preconstruction Engineering and Design (PED) phase costs as well as the planning, engineering, and design	Y	Y	Y
Inland Navigation	31	Construction Management	Estimated costs for construction management of project	Y	Y	Y
Inland Navigation		Fish and Wildlife Mitigation	Estimated costs of Mitigation	Y	Y	Y
Inland Navigation	18	Cultural Mitigation	Estimated costs of Mitigation	Y	Y***	Y
Inland Navigation	By project element	Contingency	This is the Risk Based contingency established for the project.	Y	Y	Y
Inland Navigation	By project element	Interest During Construction (IDC)	Estimate of interest accumulated during construction(Economic cost)	N	Y	Y
Inland Navigation	By project element	Operation, Maintenance, Repair, Replacement, and Rehabilitation (OMRR&R)	Annualized estimate of Operation, Maintenance, Replacement and Rehabilitation cost.	N	Y	N
Inland Navigation	By project element	Inflation through midpoint construction	Estimate of inflation using appropriate Civil Works Construction Cost Index System (CWCCIS) factors applied to the Constant Dollar Cost	N	N	Y
Inland Navigation	By project element	Local Service Facilities (LSF)	For Navigation Only: This represents the estimated cost of Local Service Facilities as defined in the Planning Guidance Notebook Appendix E. These are the responsibility of the non-Federal entity and are required as part of the PCA if	N	Y	Y
Inland Navigation		Associated and Other Costs	Associated financial costs that are not part of the recommended Federal project but are a necessary non-Federal responsibility. These cost are required to be shown within the Chief's report, as a separate total but are not to be included	N	Y	Y
COASTAL STORM	01,02	Lands, Easements, Rights of Way, Relocations, and Dredged Material Disposal Areas (LERRD). This includes related Federal administrative costs.	Estimated value/costs of LERRD for the project (to include breakout of related Federal administrative costs).	Y	Y	Y
COASTAL STORM	03 - 20	Construction Elements	Physical Construction cost estimate broken out by Civil Works Breakdown Structure(CWBS).	Y	Y	Y
COASTAL STORM	30	Planning, Engineering, and Design (post feasibility work)	Estimated costs for post feasibility planning, engineering, and design for the project. This cost should include the estimate of Preconstruction Engineering and Design (PED) phase costs as well as the planning, engineering, and design	Y	Y	Y
COASTAL STORM	31	Construction Management	Estimated costs for construction management of project	Y	Y	Y
COASTAL STORM		Fish and Wildlife Mitigation	Estimated costs of Mitigation	Y	Y	Y
COASTAL STORM	18	Cultural Mitigation	Estimated costs of Mitigation	Y	Y***	Y

COASTAL STORM	By project element	Contingency	This is the Risk Based contingency established for the project.	Y	Y	Y
COASTAL STORM	By project element	Continued Construction (periodic nourishment)	For Hurricane and Storm Damage Reduction Only: Estimate of Allowable Periodic Average future construction cost submitted for authorization.	Y	Y	Y
COASTAL STORM	By project element	Interest During Construction (IDC)	Estimate of interest accumulated during construction(Economic cost)	N	Y	Y
COASTAL STORM	By project element	Operation, Maintenance, Repair, Replacement, and Rehabilitation (OMRR&R)	Annualized estimate of Operation, Maintenance, Replacement and Rehabilitation cost.	N	Y	N
COASTAL STORM		Inflation through midpoint construction	Estimate of inflation using appropriate Civil Works Construction Cost Index System (CWCCIS) factors applied to the Constant Dollar Cost	N	N	Y
COASTAL STORM		Associated and Other Costs	Associated financial costs that are not part of the recommended Federal project but are a necessary non-Federal responsibility. These cost are required to be shown within the Chief's report, as a separate total but are not to be included within the cost shared project cost.	N	Y	Y

Feature Code Definitions

CWBS	Def n t ons
01 Lands and Damages	This feature includes all costs of acquiring for the project (by purchase or condemnation) real property or permanent interests therein, including Government costs, damages, and costs of disposal of real estate. Government costs include planning expenses for the real estate portion of the General Design Memo and for the detailed Real Estate Memo; and project real estate office administration, surveys, and marking for land acquisition purposes and appraisals. For projects which require that costs be incurred on real estate activities, i.e., for records search, appraisals, and field inspection to assure compliance by local interests in the provision of local requirements on projects where no Federal land acquisition is involved, a memorandum statement will be provided with the PB-3 indicating the estimated costs of such real estate activities. These costs will be charged to feature 30, Engineering and Design and that feature will be properly footnoted to show the amount of such costs. A similar footnote will be shown on the PB-1's and PB-2a's for all such projects. This feature is credited with disposal receipts from sale of such items as standing crops, standing timber, structures, and improvements in place and acquired with the land. Disposal receipts from sale of excess land not turned in to the U.S. Treasury as miscellaneous receipts are credited to this feature. Lands or interests purchased for relocations and conveyed to others are included in the feature "Relocations." Temporary interests such as leases are included in the feature or distributive item benefited thereby.
02 Relocations	This feature includes removing and relocating, or reconstructing property of others, such as roads, railroads, cemeteries, utilities, buildings, and other structures; and lands or interests purchased for such relocations and conveyed to others, including real estate planning and acquisition expenses. The cost of removal of improvements from the reservoir area for disposal is included in the feature "Reservoirs." All alterations of railroad bridges in accordance with Section 3 of the 1946 Flood Control Act (22 USC 701p) are also included in this feature.
03 Reservoirs	This feature includes clearing lands in reservoirs and pools of debris, brush, trees, improvements, and structures. Any salvage, obtained by sale or disposal by the Government, of material removed in clearing operations is credited to this feature. This feature also includes bank stabilization, shoreline improvement, firebreaks, fencing, boundary line survey and marking of land which has been acquired or is to be acquired, rehabilitation of natural resources, erosion control, drainage, and rim grouting and mine sealing, etc., to prevent leakage. Site clearing, grouting, etc., incidental to and required for specific construction features is included as part of the construction features.

04 Dams	This feature includes dams and all other water collecting and storage facilities, whether man-made or natural, together with appurtenant diversion, regulation, and delivery facilities and spillways, outlet works, and power intake works, whether separate from the dam or not. In the case where the powerhouse is an integral part of the intake dam, the cost of the power intake dam is included in the feature "Power Plant." Any auxiliary dams or spillways detached from the main structures and floating trash and drift booms and barriers are included in this feature. The power intake works include such power items as forebay, penstocks, tunnels, surge tank, gates, operating equipment, and appurtenances. Service roads and service railroads on the dam are included in this feature. The additional cost of relocating highways and railroads across the dam is included in the feature "Relocations."
05 Locks	This feature includes facilities to provide for passage of waterborne traffic, including gates, valves, operating mechanisms, cribs, fills, lock walls, guide and guard walls, operating buildings, and excavation therefore. The lock structure is considered that part of the work within the limit lines extending from the upper end of the upper guide or guard walls to the lower end of the lower guide or guard walls, including dolphins within the lock approaches for tie up, guard, or guide purposes. Excavation or dredging• required in approaches outside of the limits defined above for the lock structure is included in the feature "Channels and Canals." The cost of a cofferdam or the properly allocable amount thereof, if required, is charged to this feature. Locks provided in connection with facilities for the prevention of encroachment of salt water are included in this feature. Locks in connection with fish facilities are included in the feature "Fish and Wildlife Facilities."
06 Fish and Wildlife Facilities	This feature includes items such as ladders, elevators, locks and related facilities for passage of fish at dams and navigation locks and maintenance of fish runs; and provision for wildlife preservation.
07 Power Plant	This feature includes those facilities specifically required for the production of power other than those included in the feature "Dams," and consists of the following: powerhouse, turbines and governors, generators, accessory electrical equipment, miscellaneous power plant equipment, switchyard, and tailrace improvement for power. In the case where the powerhouse is an integral part of the power intake dam, the cost of the power intake dam is included in this feature. Where the structure of a dam also forms the foundation of the powerhouse, such foundation is considered a part of the dam. Units for production of power for the operation only of power for the operation only of navigation, flood control, or other purpose projects (excluding those projects with power as a feature) are included in other than this feature. The cost of a cofferdam or appropriate part is charged to this feature.
08 Roads, Railroads and Bridges	This feature includes permanent roads, railroads, and bridges required for access and other purposes in connection with the construction and operation of the project. This feature does not include roads, railroads, and bridges chargeable to the feature "Relocations," access roads to recreation facilities and areas, which will be charged to the feature "14. Recreation Facilities," and service roads and service railroads on structures.
09 Channels and Canals	This feature includes all forms of excavation (including dredging, preparation of spoil disposal area, and attendant facilities) necessary for the development and construction of channels, harbors, and canals for navigation purposes; and deepening, providing new, or improving existing watercourses for flood control and major drainage. Excavation of natural watercourse to provide adequate depths for navigation is included. Excavation for specific structures, such as dams and locks used in the development of waterways and conservation of water resources, is included with such structures. The removal of trees, brush, accumulated snags, drift, debris, water hyacinths and other aquatic growths from canals, harbors, and channels in navigable streams and tributaries thereof for navigational included in this feature. Excavation, clearing, and removal of accumulated snags, drifts, debris, and vegetable growth from streams for flood control and major drainage purposes also is included. Included in this feature are revetments, linings, dikes, and bulkheads constructed as channel improvement works for flood control or navigation, as against such items constructed for bank stabilization only. Also included are jetties constructed in connection with flood control channel improvements.
10 Breakwaters and Seawalls	This feature includes breakwaters, seawalls, piers, and like improvements constructed in connection with the protection of beaches, harbors, shores•, and port facilities against the force of waves and encroachment of seas or lakes by direct wave action. Jetties, groins, and like structures provided in seas, lakes, tidewater reaches of rivers and canals, and harbors to control water flow and current, to maintain depth of channels, and to provide protection, are included in this feature.
11 Levees and Floodwalls	This feature includes embankments and walls constructed to protect areas from inundation by overflow from creeks, rivers, lakes, canals, and other bodies of water. This feature consists of such items as: service roads on levee crown or landside berms, road ramps, closure structures, seepage control measures, erosion protection measures on levee slopes and on berms and bank slops when an integral part of the levees or floodwalls; and drainage facilities, constructed to provide means for the passage of accumulated drainage and seepage water and sewage from the protected area over or through levees and floodwalls, comprising such items as interceptor and collection sewers and ditches, and pressurized sewers and drainage structures, including outfalls through levees or floodwalls. Pumping plants are included in the feature "Pumping Plants." Levees locally called dikes are included in this feature.
13 Pumping Plants	This feature includes pumping plants construction to pass accumulated drainage and seepage water and sewage from the protected area over or through levees and floodwalls.
14 Recreation Facilities	This feature includes access roads; parking areas; public camping and picnicking areas, including tables and fireplaces; water supply; sanitary facilities; boat launching ramps; directional signs; and other facilities constructed primarily for public recreational use, including essential safety measures in connection therewith. The latter includes, as appropriate, sheltered anchorage areas for small craft, bathing areas readily accessible and reasonably safe, and safety provisions for visitors and fishermen in the project area. (Boat launching ramps, anchorage areas and beaches should be provided during construction to the extent they will definitely be needed and can be accomplished more economically than at a later date.)
15 Floodway Control and Diversion Structures	This feature includes floodway control and diversion structures to provide for the release of flood waters from streams where discharges exceed flood capacity of the stream, including items such as diversion dams, gated or ungated discharge structures, training walls, stilling basin, and those adjacent embankment sections forming part of the control structure. Construction of channels and levees not forming part of the main control structure, but necessary for operation of such structures is included in the appropriate feature "Channels and Canals" or "Levees and Floodwalls."
16 Bank Stabilization	This feature includes revetments, linings, training dikes, and bulkheads for stabilization of banks of watercourses to prevent erosion, sloughing, or meandering. Bank stabilization constructed in navigation channels or in connection with flood control channel improvement is included in• the feature "Channels and Canals."
17 Beach Replenishment	This feature includes replacement of eroded beaches, for purposes of recreation and shore protection, by direct deposit of materials obtained by dredging or land excavation.
19 Buildings, Grounds and Utilities	This feature includes permanent facilities such as operators' quarters, administration and shop buildings, storage buildings and areas, garage buildings and areas, community buildings, local streets and sidewalks, landscaping, and electric, gas, water, and sewage facilities. Where space in a dam, powerhouse, or other basic structure is used in lieu of construction of any of the above-mentioned buildings, such allocated space is not separated from the basic structure. Communication systems are• included in the feature "Permanent Operating Equipment."
20 Permanent Operating Equipment	This feature includes all project-owned operation and maintenance tools and equipment, such as laboratory, shop, warehousing, communications, and transportation equipment, and office furniture and equipment. The cost of installing sedimentation and degradation measuring facilities, including the surveys requisite to locating and monumenting range layouts, is charged to this feature. •The cost of planning the installation of sedimentation and degradation ranges is charged to the feature "Engineering and Design."
30 Engineering and Design	This feature includes all engineering, design, surveys, preparation of detailed plans and specifications, and related work required for the construction of the project, including relocations. Surveys and planning required in connection with land acquisition are charged to the features "Lands and Damages" or "Relocations," as applicable. Engineering and design performed by hired labor or as a pay item under a contract is included in this feature.
31 Supervision and Administration	This feature includes such functions as inspection, supervision, project office administration, and distributive costs of area office and general overhead charged to the project. Costs for OCE and Division Office Executive Direction and Management are not charged to Construction, General but to the General Expenses appropriation title.

Total Project Cost Summary

B-1. General.

A Total Project Cost Summary (TPCS) is required for all civil works cost estimates submitted for approval at all levels within the U.S. Army Corps of Engineers (Corps). The summary and supporting contract cost sheets are the basis for the official Project Cost Estimate (PB-3) ER 11-2-240. It is a living document, developed from feasibility to project completion to present current working estimate (cost, schedule (escalation), risks (contingencies). The TPCS must consider current escalation tables, which are updated twice annually: March and September.

The TPC reflects all applicable project feature costs, contingencies, escalation to Project First Cost and inflation to Fully Funded Project Costs and is presented in Federal and non-Federal dollars. The TPC emerges when the TPCS form is completed (shown in Figures B-2). The TPCS is a PDT product. While the cost engineer prepares the basic elements of the form, the PM, Real Estate and Construction offices play a major role in establishing Program Year, Federal and non-Federal shares, spent costs, 01 Lands and Damages, 30 PED and 31 Construction Management values.

For the cost engineer, the Total Project Cost form is developed and presented with three different estimates over time: Estimated Cost (Price Level), Project First Cost - Constant Dollar, and Total Project Cost – Fully Funded (reference Figure B-2)

i. Estimated Cost (Effective Price Level) (TPCS columns C through F) is the current developed cost estimate which includes contingencies. The effective price level date for Estimated Cost (shown in DAY MONTH YYYY format) is commonly reported as the previous 1 Oct 20XX to support economic study and escalation to Project First Cost

ii. Project First Cost - Constant Dollar Cost (TPCS columns G through K) is the Estimated Cost then escalated to the PROGRAM YEAR effective price level by applying the appropriate escalation from the CWCCIS tables. The Project First Cost - Constant Dollar (shown in 1 OCT 20XX) is the cost estimate used in feasibility reports and Chief of Engineer's Report (Chief's Report) for Congressional funding requests

iii. Total Project Cost (TPCS columns L through O) is the FULLY FUNDED WITH INFLATION to represent the total cost of the project. The inflation to midpoint of each activity is added from the Project First Cost column set. Total Project Cost (or Total Cost of Construction of GNFs when discussing navigation projects) is the cost estimate used in Project Partnership Agreements and Integral Determination Reports. Total Project Cost is the cost estimate provided to non-Federal sponsors for their use in financial planning as it provides information regarding the overall non-Federal cost

The Project First Cost – Constant Dollar Cost estimate is to be used in the Chief's Reports and other decision documents to support the funding request. The Project First Cost should include, among other things, an estimate of: (i) construction and management costs, including both Federal costs and non-Federal sponsor in-kind contributions, as applicable; (ii) planning engineering and design costs; (iii) lands, easements, rights-of-way, relocations and dredged materials (LERRD) values; and (iv) contingencies. Where several years elapse between the signing of the Chief's Report and the consideration of legislation to authorize a project, the Project First Cost must be updated to reflect the current Project First Cost date for Congressional funding consideration, in accordance with ER 1110-2-1302.

Figure B-1 illustrates the TPC process. Figures B-2 (summary sheet) and B-3 (sample supporting sheet) are examples based upon feasibility estimate reporting requirements in Engineer Regulation (ER) 1105-2-100, Planning Guidance Notebook. "Two project cost estimates shall be displayed in the feasibility report; one based on constant dollars and one based on projected inflation rates." The guidance notebook is referring to the Project First Cost and the Total Project Cost columns J and O. The TPCS (summary sheet) is a signature document for the appropriate district managerial approvals. ER 1105-2-100 states that project cost estimates will be prepared by or reviewed by the cost engineering office in the district and the chief of that office will sign the estimate. Real estate estimates included in the project cost are reviewed, approved, and signed by the chief or designee of the real estate office. Project Management is the third required signature that assumes responsibility for the TPCS value. Figure B-2 also lists other review/approval signatures that may be a district requirement.

Preparing a TPC during the feasibility phase is required, because it is the first document that will show the estimated total project cost at the anticipated authorizing budget year and forecast the total project cost inflated through construction based on the known scope and schedule.

B-2. Sample TPCS (Figure B-2) is in a spreadsheet format beginning with the total project cost summary followed by contract cost summary supporting sheets appearing like Figure B-3. The TPCS template can be downloaded from the Cost MCX website.

B-3. TPCS Form Procedures
a. Estimated Cost (Price Level)
TPCS Headers: Ensure the form presents the formal project name. project number. location. author and date.

Column A: WBS Number – Enter the Civil Works Breakdown code for each feature (refer to the Civil Works Work Breakdown Structure Appendix).

Column B: Civil Works Feature and Sub-Feature Description - For the summary sheet Figure B-2, enter the feature code title. For the supporting sheets like Figure B-3, enter and identify the project phase, contract, etc. as well as the CWWBS description of the item. For Figure B-3, separate lines for the same WBS element may be prudent, pending certain programs or presentations desired. The various phases or contracts on the Figure B-3 sheets is to make distinction between varying schedules of occurrence, associated escalation and risks (contingencies).

The first primary column set, sub columns C through F, is the estimated cost plus contingencies, typically in current or most recent estimated dollars (must be less than 2 years old) that includes all feature accounts: the MCACES construction estimate(s), estimates for lands and damages, preconstruction, engineering and design, and construction management. The following paragraphs are instructions for completing data entry for each scheduled contract (figure B-2 and B-3). Figure B-2 serves as the summary roll-up from the supporting sheets such as Figure B-3.

Column C: COST- Entered in this column are the estimates of those costs that require funding or are remaining costs yet to incur. The costs should reflect the actual estimated costs in $1000s based on the previous October price level that the estimate was prepared. Note: For the Real Estate estimate, ensure the estimate is recent and the contingencies (incremental costs) are separated from the appraisal quote for presentation in the contingency column.

Column D: CNTG (contingency) - This is the dollar amount of contingency determined from a risk-based analysis. It is the result of Column C times the entered contingency percent in Column E or an actual amount determined by a cost risk analysis.

Column E: CNTG % (contingency percentage) - Enter the percentage of contingency (from risk analysis). For 30 and 31 accounts you may want to use the average of the construction element contingencies in lieu of developing a separate contingency. For 01 Lands and Damages, the Chief of Real Estate is responsible to provide a signed estimate of costs and should be able to provide contingency data, also referred to as incremental costs. Ensure that the real estate contingency is separated from the real estate estimate and presented separately as contingency. Contingency is the full dollar value of the various features, converted to a contingency. Reliance solely on a per cent value can induce errors when differing contingency sources such as real estate are also used.

Column F: TOTAL - This is the sum of columns C and D.

b. Project First Cost – Constant Dollar.
The second primary column set is the Project First Cost, also known as the Constant Dollar total. This totaled cost is the one reflected in all Chief's reports for requested funding: effective price level for the year of the Chief's Report submissions. Typically the year of the report submission is the year prior to the anticipated funding. This total can become more complicated for ongoing projects with spent costs that require additional funding.

Column G: - ESC (escalation) This column is the percentage of escalation from the first column set to the PROGRAM YEAR DATE. This moves the estimate cost from the price level when it was prepared to the Program Year price on a constant dollar basis. This escalation is calculated utilizing the Civil Works Construction Cost Index System (CWCCIS) found in EM 1110-2-1304. The CWCCIS is a reflection of the OMB projected rates for future costs, experienced inflation for past costs for each of the Feature categories. The escalation tables are updated twice annually: March and September. To determine the escalation percent, locate the CWCCIS index factors of the Feature account or element for the 1st quarter date of the program year and divide by the index factor of the established or initial estimate date (no less than 2 years old). Subtract value of 1 and multiply by 100 to obtain the percent escalation.

Column H: COST - This is the cost from Column C with the added percent of escalation computed in Column G.

Estimated Cost to Project First Cost

EPL Estimate + Continuency (1 Oct 20XX) Risk Based (Current Dollars)	+	Contingen (risk	x	Cost Index (Budget Yea	=	**Project First Cost Budget Yea**				
				Cost Index (EPL - Current Estimate)		**Constant Dollars**				

Column I: CNTG (contingency) - This is the Contingency value from Column D with the added escalation determined in Column G.
Column J: TOTAL- This is the sum of Columns H and I. This is the constant dollar estimate at PROGRAM YEAR price level, 1 October, also referred to as Project First Cost, excluding any project spent costs. within the Chief's Report. For ongoing projects, the Project First Cost would include Spent Costs to reflect total first costs for the project.
SPENT THRU - Enter the amount of EXPENDED Federal funds for each Feature (this information is commonly obtained from project or program managers. Caution here is advised. If these funds have been expended by a sponsor, but the Government has not yet spent reflective Federal funds, those costs must remain in the Project First Costs, excluding escalation and contingencies. The spent costs of FEDERAL project dollars, already received and expended, is entered as actual amount spent in the year it was spent. The year of the expenditure must exclude inflation and contingencies because no further inflation or risks on these costs can occur This is entered on the TPCS (figure B- 2) (PAGE 1) only
c. Total Project Cost (Fully Funded with Inflation).
The third primary column of the TPCS is the total project cost estimate inflated through project completion, which is the second cost estimate referred to from the Planning Guidance Notebook. For financial analysis, an inflated dollar basis is to be used for the sponsor's information. Reasonably accurate and complete cost estimates and schedules are necessary for the Federal Government and the non-Federal sponsors to make prudent financial and budgetary decisions in obtaining and expending funds
The project schedule is used to forecast when project elements will begin and the duration of each element. Knowing how each activity/element is funded and its respective duration will illustrate when the costs are expected to occur. In cases where multiple construction contracts or phases are planned, each should be addressed separately to present a more realistic escalation to design and construction midpoints for each contract. It is recommended that separate contracts be presented as a subset spreadsheet with values that roll up to the summary level total (Figure B-1).

Column L: INFLATED – This is the inflation percentage from PROGRAM YEAR price level to the MIDPOINT of the performance period of each Feature item. Midpoint dates are determined from the Project Schedule. The amount shown in the column is the percentage of increase.
For construction contracts and other project elements having a relatively short duration, choosing an index coinciding with the midpoint of the duration may be adequate to escalate the costs for inflation. Also, activities/elements that are primarily level of effort, where costs are relatively consistent throughout the duration, a date at the midpoint of the duration is usually adequate to select the CWCCIS index to inflate the activity/element cost.

Project First Cost

Budget Year x

Constant Dollars

Cost Index (Midpt of Activity	=	**ully Funded**				
Cost Index (Budget) (Year)						

m. Column M: COST- Is the cost from Column H with midpoint inflation added from the CWCCIS calculations (column L).

n. Column N: CNTG (contingency) - This is the Contingency dollar value from Column I with the added inflation factor (column L).
o. Column O: FULL (fully funded amount) Is the fully funded estimate amount for the Item (Column M + Column N + Spent Costs). The overall summation of column O on the TPCS (Figure B-2) is the TOTAL PROJECT COST ESTIMATE inflated through the Project Schedule midpoint for each separate activity.
o. Column P: Found on the succeeding sheets. such as Figure B-3. for the TPC summary. the column presents the midpoint date for the inflated value for each Feature.

The costs of water resources studies and projects developed by the Corps are shared between Federal and non-Federal entities as defined in laws and administrative provisions. The Water Resources Development Act of 1986, established new cost sharing rules for all studies and projects conducted by the Corps. The cost sharing provisions of the Water Resources Development Act of 1986 place greater financial responsibilities on non-Federal sponsors of Corps projects. The amount of non-Federal share varies depending upon the project purpose and the general and specific laws that apply to each project. Coordination with Project and Program Management is required to clarify this share percentage. Cost sharing can and does change over time.

The total project cost inflated through construction is divided into Federal cost and non-Federal cost. The non-Federal cost is for the sponsor's information and financial analysis. The cost engineer must coordinate with the project manager to determine the appropriate cost sharing percentages applicable to the project. To illustrate, the cost of feasibility studies is shared equally (50/50) and the remaining project cost may be shared 25 percent non-Federal cost and 75 percent Federal cost. Guidance on cost sharing for each civil works mission and authority is presented in ER 1105-2-100 and coordination with the project manager is necessary.
B-4. Section 902 Project Cost Limit.
When appropriate for authorized projects spanning several years, the TPCS is updated annually for comparison to the Section 902 project cost limit. It can be computed and presented on the updated TPCS to serve as a current working estimate.
The maximum project cost limit imposed by Section 902 is a numerical value specified by law, which must be computed in a legally supportable manner. It is not an estimate of the current cost of the project. The construction component of the authorized cost will be updated to account for current scope, quantities, costs, schedules and risks and applying escalation using the current CWCCIS escalation tables. The real estate component of the authorized cost will be updated to account for historical inflation based on changes to the Consumer Price Index. ER 1105-2-100, appendix G paragraph G-15a provides detailed guidance on the calculations necessary to determine the numerical value

Estimated Cost (Price Level) is the initially developed cost estimate which includes contingencies. The effective price level date for Estimated Cost (shown in MONTH YYYY format) is usually the date of preparation of the cost estimate.

Project First Cost (Constant Dollar Cost) (Price Level) is the Estimated Cost BROUGHT TO THE EFFECTIVE PRICE LEVEL. The effective price level for Constant Dollar Cost (shown in MONTH YYYY format) is the date of the common point in time of the pricing used in the cost estimate. Constant Dollar Cost does not include inflation. Constant Dollar Cost at current price levels is the cost estimate used in feasibility reports and Chief's Reports (see paragraphs 5(a) and 5(b) below). THE CONSTANT DOLLAR COST SHOULD BE EXPRESSED AS THE FY OF THE CHIEF'S REPORT TO ENSURE THAT THE CW PROGRAM TOTALS IN ONE FY DOLLAR TO ASA AND CONGRESS.

Total Project Cost is the Constant Dollar Cost FULLY FUNDED WITH ESCALATION to the estimated midpoint of construction. Total Project Cost (or Total Cost of Construction of GNFs when discussing navigation projects) is the cost estimate used in Project Partnership Agreements and Integral Determination Reports. Total Project Cost is the cost estimate provided non-Federal sponsors for their use in financial planning as it provides information regarding the overall non-Federal cost sharing obligation. See the enclosed tables for more detail of what is or is not included in the Total Project Cost.

Type of Program	CWBS*	Pro ect Cost Component**	Br ef Def n t on	For Chief s Report		For PPA s
				Project F rst Cost Constant Cost Estimate Oct (YYYY) Pr ce Level	Econom c Cost for BCR	Tota Pro ect Cost Fu y Funded Cost Estimate
Flood Risk Management	01,02	Lands, Easements, Rights of Way, Relocations, and Dredged Material Disposal Areas (LERRD).	Estimated value/costs of LERRD for the project (to include breakout of related Federal administrative costs).	Y	Y	Y
Flood Risk Management	02 - 20	Construction Elements	Physical Construction cost estimate broken out by Civil Works Breakdown Structure(CWBS).	Y	Y	Y
Flood Risk Management	30	Planning, Engineering, and Design (post feasibility work)	Estimated costs for post feasibility planning, engineering, and design for the project. This cost should include the estimate of Preconstruction Engineering and Design (PED) phase costs as well as the planning, engineering, and design costs during the construction phase to complete the project.	Y	Y	Y
Flood Risk Management	31	Construction Management	Estimated costs for construction management of project	Y	Y	Y
Flood Risk Management		Fish and Wildlife Mitigation	Estimated costs of Mitigation	Y	Y	Y
Flood Risk Management	18	Cultural Mitigation	Estimated costs of Mitigation	Y	Y***	Y
Flood Risk Management	By project element	Contingency	This is the Risk Based contingency established for the project.	Y	Y	Y
Flood Risk Management	By project element	Interest During Construction (IDC)	Estimate of interest accumulated during construction(Economic cost)	N	Y	Y
Flood Risk Management	By project element	Operation, Maintenance, Repair, Replacement, and Rehabilitation (OMRR&R)	Annualized estimate of Operation, Maintenance, Replacement and Rehabilitation cost.	N	Y	N
Flood Risk Management	By project element	Inflation through midpoint construction	Estimate of inflation using appropriate Civil Works Construction Cost Index System (CWCCIS) factors applied to the Constant Dollar Cost	N	N	Y
Flood Risk Management	By project element	Associated and Other Costs	Associated financial costs that are not part of the recommended Federal project but are a necessary non-Federal responsibility. These cost are required to be shown within the Chief's report, as a separate total but are not to be included within cost shared project cost	N	Y	Y
Ecosystem Restoration	01,02	Lands, Easements, Rights of Way, Relocations, and Dredged Material Disposal Areas (LERRD). This includes related Federal administrative costs.	Estimated value/costs of LERRD for the project (to include breakout of related Federal administrative costs).	Y	Y	Y
Ecosystem Restoration	03 - 20	Construction Elements	Physical Construction cost estimate broken out by Civil Works Breakdown Structure(CWBS).	Y	Y	Y
Ecosystem Restoration	30	Planning, Engineering, and Design (post feasibility work)	Estimated costs for post feasibility planning, engineering, and design for the project. This cost should include the estimate of Preconstruction Engineering and Design (PED) phase costs as well as the planning, engineering, and design costs during the construction phase to complete the project.	Y	Y	Y
Ecosystem Restoration	31	Construction Management	Estimated costs for construction management of project	Y	Y	Y
Ecosystem Restoration		Fish and Wildlife Mitigation	Estimated costs of Mitigation	Y	Y	Y
Ecosystem Restoration	18	Cultural Mitigation	Estimated costs of Mitigation	Y	Y***	Y
Ecosystem Restoration	By project element	Monitoring and Adaptive Management	This represents the estimated costs of monitoring and or adaptive management to be cost shared for the project.	Y	Y	Y
Ecosystem Restoration	By project element	Contingency	This is the Risk Based contingency established for the project.	Y	Y	Y
Ecosystem Restoration	By project element	Interest During Construction (IDC)	Estimate of interest accumulated during construction(Economic cost)	N	Y	Y
Ecosystem Restoration	By project element	Operation, Maintenance, Repair, Replacement, and Rehabilitation (OMRR&R)	Annualized estimate of Operation, Maintenance, Replacement and Rehabilitation cost.	N	Y	N
Ecosystem Restoration	By project element	Inflation through midpoint construction	Estimate of inflation using appropriate Civil Works Construction Cost Index System (CWCCIS) factors applied to the Constant Dollar Cost	N	N	Y
Ecosystem Restoration		Associated and Other Costs	Associated financial costs that are not part of the recommended Federal project but are a necessary non-Federal responsibility. These cost are required to be shown within the Chief's report, as a separate total but are not to be included within the cost shared project cost	N	Y	Y
Navigation and Harbors	01,02	Lands, Easements, Rights of Way, Relocations (LERR). This includes related Federal costs.	Estimated value/costs of LERR (to include breakout of related Federal administrative costs).	Y	Y	Y
Navigation and Harbors	03 - 20	Construction Elements (General Navigation Features)	Physical Construction cost estimate broken out by Civil Works Breakdown Structure(CWBS).	Y	Y	Y
Navigation and Harbors	30	Planning, Engineering, and Design (post feasibility work)	Estimated costs for post feasibility planning, engineering, and design for the project. This cost should include the estimate of Preconstruction Engineering and Design (PED) phase costs as well as the planning, engineering, and design costs during the construction phase to complete the project.	Y	Y	Y
Navigation and Harbors	31	Construction Management	Estimated costs for construction management of project	Y	Y	Y
Navigation and Harbors		Fish and Wildlife Mitigation	Estimated costs of Mitigation	Y	Y	Y
Navigation and Harbors	18	Cultural Mitigation	Estimated costs of Mitigation	Y	Y***	Y
Navigation and Harbors	By project element	Contingency	This is the Risk Based contingency established for the project.	Y	Y	Y
Navigation and Harbors	By project element	Interest During Construction (IDC)	Estimate of interest accumulated during construction(Economic cost)	N	Y	Y

Navigation and Harbors	By project element	Operation, Maintenance, Repair, Replacement, and Rehabilitation (OMRR&R)	Annualized estimate of Operation, Maintenance, Replacement and Rehabilitation cost.	N	Y	N
Navigation and Harbors	By project element	Inflation through midpoint construction	Estimate of inflation using appropriate Civil Works Construction Cost Index System (CWCCIS) factors applied to the Constant Dollar Cost	N	N	Y
Navigation and Harbors	By project element	Local Service Facilities (LSF)	For Navigation Only: This represents the estimated cost of Local Service Facilities as defined in the Planning Guidance Notebook Appendix E. These are the responsibility of the non-Federal entity and are required as part of the PCA if	N	Y	Y
Navigation and Harbors		Associated and Other Costs	Associated financial costs that are not part of the recommended Federal project but are a necessary non-Federal responsibility. These cost are required to be shown within the Chief's report, as a separate total but are not to be included within the cost shared project cost.	N	Y	Y
Inland Navigation	01,02	Lands, Easements, Rights of Way, Relocations, and Dredged Material Disposal Areas (LERRD). This includes related Federal administrative costs.	Estimated value/costs of LERRD for the project (to include breakout of related Federal administrative costs).	Y	Y	Y
Inland Navigation	03 - 20	Construction Elements (General Navigation Features)	Physical Construction cost estimate broken out by Civil Works Breakdown Structure(CWBS).	Y	Y	Y
Inland Navigation	30	Planning, Engineering, and Design (post feasibility work)	Estimated costs for post feasibility planning, engineering, and design for the project. This cost should include the estimate of Preconstruction Engineering and Design (PED) phase costs as well as the planning, engineering, and design	Y	Y	Y
Inland Navigation	31	Construction Management	Estimated costs for construction management of project	Y	Y	Y
Inland Navigation		Fish and Wildlife Mitigation	Estimated costs of Mitigation	Y	Y	Y
Inland Navigation	18	Cultural Mitigation	Estimated costs of Mitigation	Y	Y***	Y
Inland Navigation	By project element	Contingency	This is the Risk Based contingency established for the project.	Y	Y	Y
Inland Navigation	By project element	Interest During Construction (IDC)	Estimate of interest accumulated during construction(Economic cost)	N	Y	Y
Inland Navigation	By project element	Operation, Maintenance, Repair, Replacement, and Rehabilitation (OMRR&R)	Annualized estimate of Operation, Maintenance, Replacement and Rehabilitation cost.	N	Y	N
Inland Navigation	By project element	Inflation through midpoint construction	Estimate of inflation using appropriate Civil Works Construction Cost Index System (CWCCIS) factors applied to the Constant Dollar Cost	N	N	Y
Inland Navigation	By project element	Local Service Facilities (LSF)	For Navigation Only: This represents the estimated cost of Local Service Facilities as defined in the Planning Guidance Notebook Appendix E. These are the responsibility of the non-Federal entity and are required as part of the PCA if	N	Y	Y
Inland Navigation		Associated and Other Costs	Associated financial costs that are not part of the recommended Federal project but are a necessary non-Federal responsibility. These cost are required to be shown within the Chief's report, as a separate total but are not to be included	N	Y	Y
COASTAL STORM	01,02	Lands, Easements, Rights of Way, Relocations, and Dredged Material Disposal Areas (LERRD). This includes related Federal administrative costs.	Estimated value/costs of LERRD for the project (to include breakout of related Federal administrative costs).	Y	Y	Y
COASTAL STORM	03 - 20	Construction Elements	Physical Construction cost estimate broken out by Civil Works Breakdown Structure(CWBS).	Y	Y	Y
COASTAL STORM	30	Planning, Engineering, and Design (post feasibility work)	Estimated costs for post feasibility planning, engineering, and design for the project. This cost should include the estimate of Preconstruction Engineering and Design (PED) phase costs as well as the planning, engineering, and design	Y	Y	Y

COASTAL STORM		Fish and Wildlife Mitigation	Estimated costs of Mitigation	Y	Y	Y
COASTAL STORM	18	Cultural Mitigation	Estimated costs of Mitigation	Y	Y***	Y
COASTAL STORM	By project element	Monitoring and Adaptive Management	This represents the estimated costs of monitoring and or adaptive management to be cost shared for the project.	Y	Y	Y
COASTAL STORM	By project element	Contingency	This is the Risk Based contingency established for the project.	Y	Y	Y
COASTAL STORM	By project element	Continued Construction (periodic nourishment)	For Hurricane and Storm Damage Reduction Only: Estimate of Allowable Periodic Average future construction cost submitted for authorization.	Y	Y	Y
COASTAL STORM	By project element	Interest During Construction (IDC)	Estimate of interest accumulated during construction(Economic cost)	N	Y	Y
COASTAL STORM	By project element	Operation, Maintenance, Repair, Replacement, and Rehabilitation (OMRR&R)	Annualized estimate of Operation, Maintenance, Replacement and Rehabilitation cost.	N	Y	N
COASTAL STORM		Inflation through midpoint construction	Estimate of inflation using appropriate Civil Works Construction Cost Index System (CWCCIS) factors applied to the Constant Dollar Cost	N	N	Y
COASTAL STORM		Associated and Other Costs	Associated financial costs that are not part of the recommended Federal project but are a necessary non-Federal responsibility. These cost are required to be shown within the Chief's report, as a separate total but are not to be included within the cost shared project cost.	N	Y	Y

Feature Code Definitions

CWBS	Def n t ons
01 Lands and Damages	This feature includes all costs of acquiring for the project (by purchase or condemnation) real property or permanent interests therein, including Government costs, damages, and costs of disposal of real estate. Government costs include planning expenses for the real estate portion of the General Design Memo and for the detailed Real Estate Memo; and project real estate office administration, surveys, and marking for land acquisition purposes and appraisals. For projects which require that costs be incurred on real estate activities, i.e., for records search, appraisals, and field inspection to assure compliance by local interests in the provision of local requirements on projects where no Federal land acquisition is involved, a memorandum statement will be provided with the PB-3 indicating the estimated costs of such real estate activities. These costs will be charged to feature 30, Engineering and Design and that feature will be properly footnoted to show the amount of such costs. A similar footnote will be shown on the PB-1's and PB-2a's for all such projects. This feature is credited with disposal receipts from sale of such items as standing crops, standing timber, structures, and improvements in place and acquired with the land. Disposal receipts from sale of excess land not turned in to the U.S. Treasury as miscellaneous receipts are credited to this feature. Lands or interests purchased for relocations and conveyed to others are included in the feature "Relocations." Temporary interests such as leases are included in the feature or distributive item benefited thereby.
02 Relocations	This feature includes removing and relocating, or reconstructing property of others, such as roads, railroads, cemeteries, utilities, buildings, and other structures; and lands or interests purchased for such relocations and conveyed to others, including real estate planning and acquisition expenses. The cost of removal of improvements from the reservoir area for disposal is included in the feature "Reservoirs." All alterations of railroad bridges in accordance with Section 3 of the 1946 Flood Control Act (22 USC 701p) are also included in this feature.
03 Reservoirs	This feature includes clearing lands in reservoirs and pools of debris, brush, trees, improvements, and structures. Any salvage, obtained by sale or disposal by the Government, of material removed in clearing operations is credited to this feature. This feature also includes bank stabilization, shoreline improvement, firebreaks, fencing, boundary line survey and marking of land which has been acquired or is to be acquired, rehabilitation of natural resources, erosion control, drainage, and rim grouting and mine sealing, etc., to prevent leakage. Site clearing, grouting, etc., incidental to and required for specific construction features is included as part of the construction features.

04 Dams	This feature includes dams and all other water collecting and storage facilities, whether man-made or natural, together with appurtenant diversion, regulation, and delivery facilities and spillways, outlet works, and power intake works, whether separate from the dam or not. In the case where the powerhouse is an integral part of the intake dam, the cost of the power intake dam is included in the feature "Power Plant." Any auxiliary dams or spillways detached from the main structures and floating trash and drift booms and barriers are included in this feature. The power intake works include such power items as forebay, penstocks, tunnels, surge tank, gates, operating equipment, and appurtenances. Service roads and service railroads on the dam are included in this feature. The additional cost of relocating highways and railroads across the dam is included in the feature "Relocations."
05 Locks	This feature includes facilities to provide for passage of waterborne traffic, including gates, valves, operating mechanisms, cribs, fills, lock walls, guide and guard walls, operating buildings, and excavation therefore. The lock structure is considered that part of the work within the limit lines extending from the upper end of the upper guide or guard walls to the lower end of the lower guide or guard walls, including dolphins within the lock approaches for tie up, guard, or guide purposes. Excavation or dredging• required in approaches outside of the limits defined above for the lock structure is included in the feature "Channels and Canals." The cost of a cofferdam or the properly allocable amount thereof, if required, is charged to this feature. Locks provided in connection with facilities for the prevention of encroachment of salt water are included in this feature. Locks in connection with fish facilities are included in the feature "Fish and Wildlife Facilities."
06 Fish and Wildlife Facilities	This feature includes items such as ladders, elevators, locks and related facilities for passage of fish at dams and navigation locks and maintenance of fish runs; and provision for wildlife preservation.
07 Power Plant	This feature includes those facilities specifically required for the production of power other than those included in the feature "Dams," and consists of the following: powerhouse, turbines and governors, generators, accessory electrical equipment, miscellaneous power plant equipment, switchyard, and tailrace improvement for power. In the case where the powerhouse is an integral part of the power intake dam, the cost of the power intake dam is included in this feature. Where the structure of a dam also forms the foundation of the powerhouse, such foundation is considered a part of the dam. Units for production of power for the operation only of power for the operation only of navigation, flood control, or other purpose projects (excluding those projects with power as a feature) are included in other than this feature. The cost of a cofferdam or appropriate part is charged to this feature.
08 Roads, Railroads and Bridges	This feature includes permanent roads, railroads, and bridges required for access and other purposes in connection with the construction and operation of the project. This feature does not include roads, railroads, and bridges chargeable to the feature "Relocations," access roads to recreation facilities and areas, which will be charged to the feature "14. Recreation Facilities," and service roads and service railroads on structures.
09 Channels and Canals	This feature includes all forms of excavation (including dredging, preparation of spoil disposal area, and attendant facilities) necessary for the development and construction of channels, harbors, and canals for navigation purposes; and deepening, providing new, or improving existing watercourses for flood control and major drainage. Excavation of natural watercourse to provide adequate depths for navigation is included. Excavation for specific structures, such as dams and locks used in the development of waterways and conservation of water resources, is included with such structures. The removal of trees, brush, accumulated snags, drift, debris, water hyacinths and other aquatic growths from canals, harbors, and channels in navigable streams and tributaries thereof for navigational included in this feature. Excavation, clearing, and removal of accumulated snags, drifts, debris, and vegetable growth from streams for flood control and major drainage purposes also is included. Included in this feature are revetments, linings, dikes, and bulkheads constructed as channel improvement works for flood control or navigation, as against such items constructed for bank stabilization only. Also included are jetties constructed in connection with flood control channel improvements.
10 Breakwaters and Seawalls	This feature includes breakwaters, seawalls, piers, and like improvements constructed in connection with the protection of beaches, harbors, shores•, and port facilities against the force of waves and encroachment of seas or lakes by direct wave action. Jetties, groins, and like structures provided in seas, lakes, tidewater reaches of rivers and canals, and harbors to control water flow and current, to maintain depth of channels, and to provide protection, are included in this feature.
11 Levees and Floodwalls	This feature includes embankments and walls constructed to protect areas from inundation by overflow from creeks, rivers, lakes, canals, and other bodies of water. This feature consists of such items as: service roads on levee crown or landside berms, road ramps, closure structures, seepage control measures, erosion protection measures on levee slopes and on berms and bank slops when an integral part of the levees or floodwalls; and drainage facilities, constructed to provide means for the passage of accumulated drainage and seepage water and sewage from the protected area over or through levees and floodwalls, comprising such items as interceptor and collection sewers and ditches, and pressurized sewers and drainage structures, including outfalls through levees or floodwalls. Pumping plants are included in the feature "Pumping Plants." Levees locally called dikes are included in this feature.
13 Pumping Plants	This feature includes pumping plants construction to pass accumulated drainage and seepage water and sewage from the protected area over or through levees and floodwalls.
14 Recreation Facilities	This feature includes access roads; parking areas; public camping and picnicking areas, including tables and fireplaces; water supply; sanitary facilities; boat launching ramps; directional signs; and other facilities constructed primarily for public recreational use, including essential safety measures in connection therewith. The latter includes, as appropriate, sheltered anchorage areas for small craft, bathing areas readily accessible and reasonably safe, and safety provisions for visitors and fishermen in the project area. (Boat launching ramps, anchorage areas and beaches should be provided during construction to the extent they will definitely be needed and can be accomplished more economically than at a later date.)
15 Floodway Control and Diversion Structures	This feature includes floodway control and diversion structures to provide for the release of flood waters from streams where discharges exceed flood capacity of the stream, including items such as diversion dams, gated or ungated discharge structures, training walls, stilling basin, and those adjacent embankment sections forming part of the control structure. Construction of channels and levees not forming part of the main control structure, but necessary for operation of such structures is included in the appropriate feature "Channels and Canals" or "Levees and Floodwalls."
16 Bank Stabilization	This feature includes revetments, linings, training dikes, and bulkheads for stabilization of banks of watercourses to prevent erosion, sloughing, or meandering. Bank stabilization constructed in navigation channels or in connection with flood control channel improvement is included in• the feature "Channels and Canals."
17 Beach Replenishment	This feature includes replacement of eroded beaches, for purposes of recreation and shore protection, by direct deposit of materials obtained by dredging or land excavation.
19 Buildings, Grounds and Utilities	This feature includes permanent facilities such as operators' quarters, administration and shop buildings, storage buildings and areas, garage buildings and areas, community buildings, local streets and sidewalks, landscaping, and electric, gas, water, and sewage facilities. Where space in a dam, powerhouse, or other basic structure is used in lieu of construction of any of the above-mentioned buildings, such allocated space is not separated from the basic structure. Communication systems are• included in the feature "Permanent Operating Equipment."
20 Permanent Operating Equipment	This feature includes all project-owned operation and maintenance tools and equipment, such as laboratory, shop, warehousing, communications, and transportation equipment, and office furniture and equipment. The cost of installing sedimentation and degradation measuring facilities, including the surveys requisite to locating and monumenting range layouts, is charged to this feature. •The cost of planning the installation of sedimentation and degradation ranges is charged to the feature "Engineering and Design."
30 Engineering and Design	This feature includes all engineering, design, surveys, preparation of detailed plans and specifications, and related work required for the construction of the project, including relocations. Surveys and planning required in connection with land acquisition are charged to the features "Lands and Damages" or "Relocations," as applicable. Engineering and design performed by hired labor or as a pay item under a contract is included in this feature.
31 Supervision and Administration	This feature includes such functions as inspection, supervision, project office administration, and distributive costs of area office and general overhead charged to the project. Costs for OCE and Division Office Executive Direction and Management are not charged to Construction, General but to the General Expenses appropriation title.
