ERRATA SHEET

**FINAL ENVIRONMENTAL ASSESSMENT  
for the  
PENNSYLVANIA PIPELINE PROJECT  
CROSSING FEDERALLY OWNED PROPERTIES ADMINISTERED BY THE U.S.  
ARMY CORPS OF ENGINEERS  
(ASSOCIATED WITH CONEMAUGH RIVER LAKE, LOYALHANNA LAKE AND  
RAYSTOWN LAKE)**

**21 February 2017**

1. This Errata Sheet includes revisions to the referenced Environmental Assessment (EA) dated December 2016. A Finding of No Significant Impact (FONSI) on the subject EA was signed by the Commander, Baltimore District, on 6 February 2017, and the Commander, Pittsburg District on 8 February 2017. These documents determined that the proposed action would not have significant impacts on the quality of the human environment. This Errata Sheet addresses a specific clarification to measures to be taken to avoid and minimize impacts to recreation uses at Raystown Lake. None of the information provided in the Errata Sheet results in a significant change to the environmental conditions, impacts, or the project activity. The clarifications in this Errata Sheet were identified as the result of internal review, are not implemented to address a regulatory requirement, and no public comments were submitted during the Public Comment period.
2. Section 3.7 Recreational Uses – Page 128 – Paragraph 4 – Line 2: The following text should be deleted: “from April 1<sup>st</sup>.” In place of, the following text should be added to ensure appropriate measures are taken so the Project impacts to recreational uses are minimal: “from mid-May.” See highlighted changes and updated text below on Page 128:

“Per USACE’s request, SPLP will also implement timing restrictions on tree clearing as well as on construction to avoid the busy recreational season (summer) at USACE owned/administered properties. These timing restrictions include avoiding construction ~~from April 1<sup>st</sup>~~ ~~from Mid-May~~ to after Labor Day weekend (end of August), or after the end of October, as USACE specifically assigned to certain areas of the property at Raystown Lake, to ensure that potential Project impacts to recreational uses are minimal. SPLP also proposes to use the HDD construction method at major waterbody crossings to avoid recreational impacts on USACE properties. Furthermore, SPLP will HDD underneath Ridge Camp at Raystown Lake, and at the Bush Recreational Camp Area at Loyalhanna Lake to minimize/avoid potential Project impacts to recreational uses.”

3. Section 3.8 Aesthetics – Page 130 – Paragraph 2 – Line 1: The following text should be deleted: “April 1<sup>st</sup> through after Labor Day weekend, including tree clearing” and replaced with the following: “Mid-May through after Labor Day weekend.”

“SPLP has planned Project construction to occur outside of the busy summer season (i.e., ~~April 1<sup>st</sup> through after Labor Day weekend, including tree clearing~~ Mid-May through after Labor Day weekend) in response to a USACE request. Furthermore, SPLP has proposed to HDD through areas near campsites and heavily used recreational areas to reduce surface disturbance to the extent feasible. Therefore, minimal visual impacts are anticipated to high visibility areas at Loyalhanna Lake and Raystown Lake.”

4. Point of contact regarding this EA Errata Sheet: Mr. Michael Schuster, CENAB-PL.
