ACTIVITIES CONDUCTED (include site mobilization/demobilization, brush/tree clearing, geophysical survey, intrusive excavation, contaminated soil excavation, sampling, and restoration activities)

Safety Briefing: 6:30

Personnel set up to begin intrusive operations along the 4825 and 4835 property line. AU personnel came and removed a flood light from the 4825 side of the property. After beginning intrusive operations, it was determined that the temporary fence would have to be placed in a way that may cause concerns for the event at the president's residence. Due to concerns from AU about the temporary fence and the event, intrusive was suspended and the temporary fence moved back to its original position. Intrusive operations will resume after the AU event.

ACTIVITIES CONDUCTED (include site mobilization/demobilization, brush/tree clearing, geophysical survey, intrusive excavation, contaminated soil excavation, sampling, and restoration activities)

Safety Briefing: 6:30

Personnel began excavating area B along the 4825-4835 property line. Glass fragments were found and excavation halted. PDT agreed to continue intrusive operations. The waterline for the 4835 property line was uncovered and appears to have been damaged by an excavator sometime in the past. Parsons is making arrangements to have the waterline repaired.

End of Day: 17:00

ACTIVITIES CONDUCTED (include site mobilization/demobilization, brush/tree clearing, geophysical survey, intrusive excavation, contaminated soil excavation, sampling, and restoration activities)

Safety Briefing: 6:30

Crews continued to excavate Area B near the 4835 property line. We filled 2 roll-offs with excavated soil. Due to the depth of the excavation we need to bench some ground on the 4835 side of the line and needed to push the temporary fence closer to the house. The team began cutting back brush and moving the fence.

End of Day: 17:00

ACTIVITIES CONDUCTED (include site mobilization/demobilization, brush/tree clearing, geophysical survey, intrusive excavation, contaminated soil excavation, sampling, and restoration activities)

Safety Briefing: 6:30

Site personnel resumed excavation of area B in grid 10/-90. More of the black substance was found and mitigated. After MINICAMMS alarms the substance was sampled with DAAMS tubes and analyzed, the samples came back as non-detect. A PDT call was conducted and ECBC will collect samples of the substance for lab analyses on Friday.

End of Day: 17:00

ACTIVITIES CONDUCTED (include site mobilization/demobilization, brush/tree clearing, geophysical survey, intrusive excavation, contaminated soil excavation, sampling, and restoration activities)

Safety Briefing: 6:30

Parsons had four new personnel on site, they began site familiarization and site specific training. Other Parsons and Zimmer personnel completed the gravel pad for the PDS tent and worked on E&S controls around the tent. Parsons electrical contractor began installation of the lightning protection system at the federal property site and began wiring in equipment at the 4825 site. ECBC personnel arrived on site today and began setting up the PDS.

End of Day: 17:00

ACTIVITIES CONDUCTED (include site mobilization/demobilization, brush/tree clearing, geophysical survey, intrusive excavation, contaminated soil excavation, sampling, and restoration activities)

Safety Briefing: 6:30

Site personnel continued intrusive operations in area B. They excavated a portion of the area behind the curved retaining wall in grid 10/-90 using hand digging procedures. Teams filled twenty-seven soil drums and collected the associated soil samples.

End of Day: 17:00

SAMPLES COLLECTED: See DQCR for sample information

ACTIVITIES CONDUCTED (include site mobilization/demobilization, brush/tree clearing, geophysical survey, intrusive excavation, contaminated soil excavation, sampling, and restoration activities)

Safety Briefing: 6:30

Site personnel continued intrusive operations in area B. They excavated a portion of the area behind the curved retaining wall in grid 10/-90 using hand digging procedures. Teams filled nine soil drums and collected the associated soil samples.

End of Day: 17:00

SAMPLES COLLECTED: See DQCR for sample information

ACTIVITIES CONDUCTED (include site mobilization/demobilization, brush/tree clearing, geophysical survey, intrusive excavation, contaminated soil excavation, sampling, and restoration activities)

Safety Briefing: 6:30

Parsons and Zimmer personnel dumped three roll off boxes at the federal property site. Personnel pumped excess rainwater from area B into poly drums and transported them to the storage area. Intrusive teams filled a roll off box with backfill soil from area B and collected the associated soil sample. Site personnel continued intrusive operations in area B, grid 10/-90 and 30/-90 and removed the footer from the curved section of retaining wall.

End of Day: 17:00

ACTIVITIES CONDUCTED (include site mobilization/demobilization, brush/tree clearing, geophysical survey, intrusive excavation, contaminated soil excavation, sampling, and restoration activities)

Safety Briefing: 6:30

Site personnel worked to expose both ends of the water line going to the 4835 property in preparation for the reroute on Thursday. Maintenance contractor from ACI made repairs to the AC units for the 4835 property. Teams dumped roll off boxes and performed equipment inventory. At 1400 after lightning holds the team prepared to resume filling drums with staged soil, more lightning holds stopped this effort. At 1515 Teams began marking the line for an 8 foot right of way from the property line and take photographs. At 1535 this effort was again interrupted by lightning.

End of Day: 17:00

ACTIVITIES CONDUCTED (include site mobilization/demobilization, brush/tree clearing, geophysical survey, intrusive excavation, contaminated soil excavation, sampling, and restoration activities)

Safety Briefing: 6:30

One team worked at the federal property site pumping storm water from drums into a large storage tank. Intrusive teams continued excavating and staging soil in grid 30/-90. In the afternoon personnel drummed up the staged soil and transported drums to the federal property site. 26 drums were filled.

End of Day: 17:00

ACTIVITIES CONDUCTED (include site mobilization/demobilization, brush/tree clearing, geophysical survey, intrusive excavation, contaminated soil excavation, sampling, and restoration activities)

Safety Briefing: 6:30

Intrusive teams continued intrusive operations in area B, grid 50/-90 removing more material using hand excavation techniques. Teams continue to find AUES glass and CACM. Site personnel worked with Veolia loading soil drums for transport the incinerator. At approximately 1430 after clearing the PDS team 3 TL came to the CP and reported that he and another team member had nausea and the TL experienced vomiting. All intrusive operations were suspended and the site safety spoke with both intrusive teams. Both teams had experienced some symptoms, team 1 symptoms were not initially associated with intrusive operations. Parsons site safety notified our CIH, and the on site Baltimore representative. At 1550 Parsons site safety transported seven personnel, teams 1 and 3 to GW Memorial Hospital. At 1600 team 2 who had not been previously down range went in level C to mitigate the excavation area and spoils pile. At 1615 mitigation was complete and team 2 cleared the PDS. At approximately 2050 I received a call from our UXO safety, Bobby Nelms, that all of our personnel have been released from the hospital and are well. At the hospital they were required to shower then had blood and urine samples collected as well as vitals monitored. At this time we do not know when the lab results will be available.

End of Day: 2100

ACTIVITIES CONDUCTED (include site mobilization/demobilization, brush/tree clearing, geophysical survey, intrusive excavation, contaminated soil excavation, sampling, and restoration activities)

Safety Briefing: 6:30

There was a delay getting started as the PDS could not get up to operational temp, the problem has been resolved. Parsons down range team used the Geoprobe to collect soil samples at SB-04 then backfilled SB-03 with bentonite. SB-04 will not be backfilled for possible future soil gas monitoring. The down range team completed the concrete coring of SB-05 and SB-06.

End of Day: 1700

ACTIVITIES CONDUCTED (include site mobilization/demobilization, brush/tree clearing, geophysical survey, intrusive excavation, contaminated soil excavation, sampling, and restoration activities)

Safety Briefing: 6:30

Parsons down range team used the Geoprobe to collect soil samples at SB-07 and SB-08. Possible AUES glass found in SB-07 at approximately 4.5 ft from the top of concrete. A second team performed concrete coring at SB-09 and SB-10.

End of Day: 1700

SAMPLES COLLECTED: See DQCR for sample information

Closed cavity items found None

New Equipment on Site: N/A
